The Center for Global Trade Analysis has coordinated the Global Trade Analysis Project (GTAP) since 1992. GTAP is a global network of researchers and policymakers conducting quantitative analyses of international policy issues. The Project's centerpiece is the GTAP Data Base, a fully documented, publicly available global data base which contains complete bilateral trade information, transport and protection linkages. The GTAP Data Base is utilized by thousands worldwide, including government agencies, international institutions, the private sector and academia, and is a key input into contemporary applied general equilibrium analysis of global economic issues influencing decision making in trade, climate change, energy and the environment.
