Brief Introduction of FAST

- Freeway and Arterial System of Transportation (FAST), under Regional Transportation Commission (RTC) of So. Nevada
- Transit under RTC
- Freeway Operation in Southern NV for NDOT
- Maintain and Operate ITS devices for NDOT
- TMC with Highway Patrol
FAST provides Multi Agency Signal Coordination

• Signal coordination in Las Vegas Metropolitan Area (City of Las Vegas, North Las Vegas, Henderson, Clark County, Boulder City and Mesquite)
Las Vegas Urban Region
AGENCY FACTOIDS (SYSTEM/COMM.)

• Number of signalized intersections
  – >1000 connected by fiber
  – 0 connected by radio
  – >200 connected by twisted pair
  – 0 connected by cellular (Under testing)
  – <100 not connected to communication

• 1 engineer and 7 technicians devoted to signals

• Naztec is Central System Vendor

• 240 of signals collecting high resolution data

• 1 Year of experience with high resolution data
AGENCY FACTOIDS (DETECTION)

- Length of stop bar detectors on minor movement (One 6’x6’ for through lane, Four 6’x6’ for left turn lane)
- Use of dilemma zone or other detection on arterial main line (Yes)
- Detection Technologies used (Video, Loop, Radar)
- “Lane by Lane” or “Lane Group Detection” (Both)
- Link to detection standard number scheme (Yes)
- Detection Testing and Maintenance Practices (Yes)
- 100% of Signals with Emergency Vehicle Preemption
- 100% of Signals with RR Preemption
- Stop Bar Detection by Phase Direction
- Minimal Advance Detection
- Detection (Loops, Video, Radar) varies by Agency
- Older traffic signal cabinets (TS-1)

Detection Scheme Various by Agency
Case Study (Continuous Max-outs due to Ped Button Failure)
• MLK programmed SB through is 59 seconds
• Gain time from other phases
• 85 percentile split time is 80 secs
• 100% force off
Enhancements (Add Phase Direction)
Enhancements (Add Phase Direction)
Enhancements (Modified the hourly volume)
Enhancements (Ped actuation plot)
Enhancement (Time Space Diagram)
• Purdue Coordination Diagram shows too many dots.
• Arrival on Green are higher than actual
• SP_PDCDetectorsBySignalAndDirection missing a criteria “Has_PCD = 1”
- Lane by lane adv zones will generate duplicate graphs.
- Lane group OK.
• Over 80% controllers no Purdue Logger
• Translate split history data in ATMS.Now to Pseudo-Purdue Log
- Siemens i2 NextPhase
- Signal phase data and event data

Support Non-Purdue Logger controllers
• Controller FTP goes down randomly, requiring restarting controller in the field. Agency liability issue.
• Preemption events are not logged.
• Add Preemption Event Report
• Add Ped Actuation Report
• Filter watchdog problem detection list and email
• Report query criteria can be customized
Signal Timing Strategies:
- Flashing Yellow Arrow (FYA) Time of Day (TOD)
- When to go into/out off Coordination
- Dual Left PERMISSIVE during Non-Peak Hours
- Others??

Future of SPM for FAST
Future of SPM for FAST

- Update ITS and Traffic Signal Design Standards:
  - Count Data from Loops, Radar, Video
  - Speed Data from Radar, Bluetooth
  - Travel Time Data from Bluetooth
  - Travel Signal Cabinets (TS Type 2)
  - Others??

Future of SPM for FAST
