Fix problems once, and *forget* them!
Think **YOU** have tough patching problems?

Try **THIS** with your cold or hot mix!!!
Underwater repair - Three Months Later
SPRAY INJECTION repairs are Different!
It’s application is like a liquid, not a solid.

Patches can be placed **underwater** when removing the water is not possible! We have done it for years!
This method allows you to make repairs that are **impossible** with other materials or methods.

**Operator is perfectly clean, no splash!**
Repairs will be completed in just a few minutes with NO hard labor or mess!

Problem Solved For A Few Dollars.
The TOTAL PATCHER allows you to work in most weather conditions. Even in sub-freezing weather!
Are You Shoveling *Your* Budget Into A Hole?
THINK ABOUT IT!!!

Would you build a bridge that only lasted a week or a month, and was rough to drive over?

Would you roof your house with shingles that only lasted a week or a month, and leaked?

Would you spend thousands of dollars _every year_ on something that was temporary, when there was a permanent solution for less money?

**THAT IS EXACTLY WHAT COLD MIX IS!**
What is your patching program really costing your department?

- What do you pay per ton for your patching product? $____________________________
- What do you pay per hour for your labor to place that mix? _____________________
- What are your trucking and fuel expenses to place that mix? _____________________
- Do you ever have to repair the same areas more than once? How many times? ______
- Are your roads and streets falling apart because you cannot catch up? ____________
What is your patching program really costing your department?

- Are you spending what is remaining in your budget to repave your streets after your maintenance program fails? __________________
- Does one call to the paving company wipe out your annual road or street budget?

 WHAT IS THE TRUE COST OF YOUR CURRENT PATCHING PROGRAM?
Make Long Lasting Repairs For About $40.00 Per Ton!
Repair your worst nightmares in minutes for a few dollars!!!
Save Your Roads and Your Budgets
The Problem Is Solved In Minutes In The Snow!
How does the process work?
First you tack the area.
Next you place a mixture of emulsion and aggregate.
Then you place dry stone on top as cover material.
Repairs are ready for traffic right away. Immediate traffic helps cure the repair.
Traffic then blends the repairs where they become part of the surface.
Repair Potholes, Alligator Cracks, Shoulders, Bridge Decks, Culvert Pipes, Erosion Problems and more...
The liquid nature of the spray injection repair allows it to penetrate cracks and become part of the old surface. The repair is WATERPROOF and seamless.
Completed repair will normally outlast the rest of the road surface. Your plows will slide right over the repair and will not peel it up.
Special applications are easy!

Apply tapered shoulders.
