The American Psychological Association (APA), founded in 1892, is the major psychological organization in the United States. With over 118,000 members and affiliates, it includes most of the qualified psychologists in the country.

As a not-for-profit association publisher, APA shares many of the concerns and operating philosophies of university presses: a commitment to the publication of affordable quality books and journals that will meet the information needs of students, teachers, and researchers, as well as the needs of practitioners who may or may not have an institutional affiliation.

The APA journals are among the most widely circulated, most frequently cited, and most often used publications in the behavioral and social sciences. During the 1990's, APA members have supported the development and acquisition of new journals that reflect their expanding areas of interest — Neuropsychology, Journal of Family Psychology, Experimental and Clinical Psychopharmacology, and Health Psychology. Journals in development include Journal of Experimental Psychology: Applied; Psychology, Public Policy, and Law; and Psychological Methods.

In addition to its own journals, APA provides a publishing service to smaller not-for-profits through its Educational Publishing Foundation. Many of the same rigorous standards of quality are adhered to by these publications, and APA is able to assist in bringing these specialty journals to the attention of a wider audience. Two journals currently being published under this program are Psychology of Addictive Behaviors and Consulting Psychology Journal.

The APA Book Program has expanded rapidly during the past decade, while sustaining attention to quality — the same peer-review and quality standards applied to journal articles are applied to book manuscripts. The current list includes over 250 titles, from the well-known Publication Manual of the American Psychological Association (which has sold over a million copies) and Library Use: A Handbook for Psychology, to the more recent titles, such as Handbook of Clinical Hypnosis, Dissertations and Theses from Start to Finish: Psychology and Related Fields, History of Psychotherapy, and Aggression and Violence: Social Interactionist Perspectives.

Last, but not least, the APA information service, PsycINFO, has been actively working with our library colleagues to put the most comprehensive information available about the entire literature in psychology into print and electronic formats that will be readily accessible to students and researchers. Psychological Abstracts began publication as a print product in 1927 and printed 2,730 abstracts of articles from 165 journals; in 1992 45,313 abstracts were printed from over 1300 journals — another reflection of the growth of the field. In addition to the original abstracts journal, topical subsets are published in the Psychoanalytic Abstracts and 6 “PsycSCANS” in the areas of developmental, applied, and clinical psychology, as well as learning disabilities and mental retardation, neuropsychology, and applied experimental and engineering psychology.

The PsycINFO electronic products include the online bibliographic abstracts service, also called PsycINFO, and the CD-ROM product, PsycLIT. Currently, the PsycINFO database contains bibliographic entries and abstracts for journal articles, dissertations, book chapters, and books cumulated since 1967. Behind the scenes, data is being entered for earlier literature, and beginning in 1994, the database will include material from 1920 to the present, creating an exciting new resource for students, researchers, and historians from a variety of fields.

[APA publishes all archival journals and books on acid-free paper. In addition, APA monitors materials and recycling developments in order to make ecologically responsible mailing and packaging choices.]
