Challenges in Assessing Research...

Inherent weaknesses in current peer review process

- Size of lag (slowness of citation measures)
- Journal titles (JIF) as proxies for quality
- Unclear relationship between citation counting and impact
- Shortcomings for Interdisciplinary Research
Challenges in Assessing Research...(ct’d)

- Variation in value of outlets (outputs) by discipline

- Slow publication rates, especially in more prestigious “containers”
What’s making me angry is that I submitted to this journal because of its high reputation, its high rejection rate, its mass adoption by academic libraries ... and it turns out that they have a standing two year delay on publication. Let me be perfectly clear: once you go through the whole year of being reviewed and re-reviewed and your piece is accepted, your publication date will be two further years in the future. ...... Now, I work in new media. My article will be about three years old when it finally appears...... I consulted my chair, who consulted my dean. They, by contrast, congratulated me on having my work “appear” in such a high profile venue, and told me to leave it there.
