Higher Education and Libraries: Views from the Networked Environment

1 The Information Technology Imperative For Higher Education — Comments Made At 16th Annual Charleston Conference, Charleston, South Carolina, November 7, 1996 — by William T. Snyder (Chancellor, The University of Tennessee, Knoxville). Information technologies have enhanced access to information without regard to physical location. The evolution of libraries on university campuses has been a continuous struggle of acquiring adequate financial and physical resources. What do these truisms mean for our future?

22 Winning the Accreditation Game: The Library as Key Player and Hidden Gold Mine — by Antje Mays. So the library is the campus white elephant which no one in the college administration understands? At a time in which libraries struggle to maintain adequate funding levels, explain the continued need for their existence “despite” the growth of electronic resources, a seldom-tapped gold mine exists right at the library administrators’ fingertips — the library’s role as key player in college-wide and departmental (re)accreditation.

24 The Evolution from Functional to Virtual Library — by Norman Desmarais and Judy Luther. Through the years, a library was defined as a collection of written materials containing information. With the advent of electronic networking, users can connect to remote databases which effectively function as the library used to, offering information for retrieval and sometimes delivering it directly to end users. This raises the question: “What’s happening to the collections that are identified as part of the library and how does that impact the role of librarians?”

82 Back Talk — Tony Ferguson.
