Translational medicine is an emerging and important new field in science that requires collaboration across multiple disciplines. It is the process in which basic research moves from discoveries in the laboratory to actual clinical applications that will improve human health care around the world.

Basic biomedical research has seen tremendous progress throughout the world in the last few decades. However, as far as the treatment of human disease, progress has not kept pace with that of biomedical research.

**Science Translational Medicine** provides a current understanding of the diverse streams of knowledge that will have a direct impact on public health.

**Science Translational Medicine** will help improve the multidirectional process where basic research informs clinical research, and clinical research informs basic research. This resource will be the forum where basic and clinical researchers can share their knowledge to help improve human health care. Research that comes from the lab will now find its beneficial expression in patients.
