process provided us with the structure within which to address these needs responsibly. We initially defined the mission of the collaboration as follows: To support the research, teaching, and public service goals of the University of California by publishing high-quality, certified UC-sourced scholarship in emerging digital research publication genres. We then proceeded to work with our consultant to develop a set of tools for evaluating projects, distributing resources, and funding our efforts. The very act of producing these documents forced us to take a hard look at the point of convergence and divergence for our organizations. We realized that projects that appealed to UC Press from a scholarly content perspective did not necessarily mesh well with the technical development resources at the CDL. And projects that seemed a good fit for the CDL's technical core competencies were not necessarily aligned with UC Press's publishing agenda. In many cases, we were evaluating projects that were so innovative both in their technology and their academic methodology that we needed to extrapolate rather significantly in order to get a picture of how we might collaboratively provide value added. After a few months of these conversations, we realized that we were being too ambitious in the early stages of our collaboration. What we needed to do—before we could take on the most complex and pioneering digital publishing projects at UC—was to better understand how our core services complemented each other. From there, we could better evaluate the projects that were a good fit for our collaboration in terms of resources, skill sets, mission and academic quality.

An Organic Approach: UC Publishing Services

Indeed, it was the act of evaluating our current partnership projects and comparing our core competencies that revealed to us a natural and more organic step to a formal collaboration: UC Publishing Services (UCPubs). UCPubs is a joint effort to respond to substantial and often unmet publishing needs and opportunities within the UC community, as revealed by our research. The program combines the open access digital publishing services provided by the CDL through eScholarship with the distribution and marketing services offered by UC Press. UCPubs represents an effort to provide a suite of publishing services that is robust and flexible enough to support the complexities of content, format, and dissemination that increasingly define the scholarly communications sphere.

We have already developed a working prototype. Originally launched in 2004, Global and International Archive (GAIA) Books produces monographs and edited collections that are accessible in open access from eScholarship and as print books through UC Press. As of 2008, the program has achieved its goal of producing five scholarly books each year. GAIA has a separate editorial board that approves books for publication. A publications director develops, edits, typesets, and delivers finished volumes to UCPubs. GAIA controls the editorial direction and selection of all titles.

UCPubs supports GAIA’s publishing program with a set of key services. We will now extend these and additional services to other potential publishing partners within UC, including centers, institutes, and departments that produce scholarly research materials. These partners can select from a menu of services designed to address their publishing needs, from digital to print:

- Book and journal publication (electronic/print)
- Preprint and postprint dissemination (electronic)
- Conference proposal management and proceedings publication (electronic/print)
- Multiple/hybrid business models: open access and sales of print
