Wastewater, smelter smoke, landfills, pesticides, toxic chemicals, these and other environmental problems are among the hottest topics for today’s academic libraries. This is true whether or not a library supports engineering programs, so we think that a list of YBP’s best selling titles for the past year in LC subclass TD Environmental Technology will appeal widely, especially so, perhaps, in those libraries with no engineering selector to comb that specialized body of literature. Our top seller for the year, The Sanitary City: Urban Infrastructure in America from Colonial Times to the Present (Johns Hopkins) will certainly find a place in most academic collections; but the more technical titles on this list have been widely purchased too, from Air Pollution Engineering Manual (Wiley), to Drinking Water Handbook (Technomic), to Water Distribution Systems Handbook (McGraw).

MEMORY LANE

ATG Millennium Issue

Do you remember the days of manual or electric typewriters, electric erasers, or filing cards in the card catalog? How about carbon paper? How about the days when librarians "shushed" everybody and we didn't even have Wilson indexes? Or when we had to use punch cards and no PCs. Or maybe you remember what books were on the bestseller list when you went to library school? Do you remember someone or something that you want to share with us?

Make the Millennium Issue a real treat for all of us. Write down your memories or favorite moments and send them to us. We need your submissions. Photographs also welcomed.
