Something to Think About — Libraries are Dangerous Places!

Column Editor: Mary E. (Tinker) Massey (Serials Librarian, Embry-Riddle Aeronautical University, Jack R. Hunt Library) <masse36e@erau.edu>

I guess I’ve worked in libraries a little over forty years, and there have been a lot of problems and dangerous situations from the earliest of times. My biggest problem when I first started working was not having a ladder to gain access to the higher-shelved materials. I used desks, chairs, trash cans, and all manner of boxes. Almost invariably, I would end up six feet below in the middle of a trash can full of papers. Well, at least I got a soft landing.

We also had occasion to rescue some of our student workers from electric pencil sharpeners, electric eraser burns, scalpels removing fingertips and not old signage or call numbers, irons to put on labels or take off old ones, and even the typewriters that would catch unruly typists trying to unstick the keys or loosen the new balls. I hated the extra large heavy-duty staplers that would catch you off-guard when you put pamphlets together. THEN, we acquired “Compact Storage,” first with manual controls and then those with electric controls. Sometimes it wasn’t the controls, but a way to move boxes from the shelves onto dollies without wrenching your back into knots so tight that you couldn’t feel your toes anymore.

I can remember a few years when we gave up the unusual machines and dangerous stuff to just sit back and enjoy the dust of eons scattered around us. No band-aids! No splints! No crutches! It was heaven! Then, the electronic age drifted in and we began again finding out what could hurt us. Yet... there were still some old items around that could get you good. Libraries have all kinds of dangerous situations, and we never realize it. A week ago, I stopped to help a patron find some titles he needed and then returned to my business of measuring titles we were about to move. As I came around the corner of some shelving, I ran into something. From the noise and heft of the piece, I knew it was a Kik-Step, our friendly step stool. I just stayed on the floor expecting someone to come to my rescue and help me. Nope! A room full of people, and no one to help. If only they would call Circulation?! Nope! Get up, you fool! You need to get out of the aisle. It’s like falling in the middle of the street, you’re afraid you’ll get run over if you stay there. If there’s one thing I hate, it’s that has wheels on the bottom to move when it is attacked. Whoops! It didn’t move and I went flying over the top step and down on the floor behind it. Crumpled beyond belief, my first thought was why didn’t it move? I heard the jangle as it sprang up from my bodyweight. No! Step stools! They’ll get you every time! I should have thought about that one quicker!!

Great Expectations

Maximizing Efficiency & Value in Collection Management & Discovery

“It was the best of times, it was the worst of times.” In many respects this is true of the current state of electronic resources. The selection of materials has never been as vast, but the management and discovery challenges were never imagined a decade ago.

From e-journals and e-books to robust aggregated full-text databases, there are more content options available than ever before. With the abundance of options comes the challenge of the best way to manage the multitude of internal details while optimizing the user experience.

It’s time to take the next step to get the maximum value from your e-resources.

Join us as a panel of librarians and EBSCO representatives discusses ways to meet user expectations for quick, high-quality e-resources without blowing what for many is already a reduced budget.

had the time. This year we did a poetry reading at our local library and last year I acted in a one act play that Howard directed for the One Act Play Festival in New Jersey.

I look forward to volunteer work — maybe even in a library! And oh yes, continuing to collect and read books.
