willing to grant. The Boing Boing piece came about because the individual posting it laughed that there were only three people in the library and two of them old. Of, course the aged do not matter much in this country, but the critic — who did not explain his own presence there — should know that library visits (http://1.usa.gov/vNU3Tk) are higher than ever. Like any enduring service organization, libraries are much farther along in some areas, farther behind in others, and both are tied to budgets that cover only part of the needed costs. During all economic downturns such as the one we are now in, libraries become a haven for just about everyone. Aren’t we glad we didn’t eliminate them a decade ago when so many called for their extermination?

The first large question is, Will the Internet replace libraries? I think the honest answer is, eventually, and probably sooner than later. In fact, it already has in some cases. School libraries are a thing of the past, and public ones, when not closing altogether, are cutting hours, even with visits up (again, budgets are killing them off, one by one). Too many young people who will inherit these large, sprawling, and grand libraries have no idea why they were built, and have no will to continue to fund them. Furthermore, the eagerness to get rid of print shows up at every turn. Magazines have all but died off, newspapers are dead, and only books remain. We think the Web can solve everything. Perhaps we should examine more closely its solutions to our problems to be sure those are the ones we want, not the ones we’re settling for.

But le livre reste, will the printed book endure? I do not see how it can. It will persist because there are still too many people like me who will work to keep them alive a bit longer. But rising generations see print books and digital ones as completely fungible entities, with the digital less costly and more convenient. Does it have to be all or nothing? Must everything go digital? Probably.

The second large question is, Will we be better off without libraries in their current form? I can’t imagine that we will. When Gutenberg invented his press, we not only lost the painstaking care of wonderfully-made books, but we also lost something of the love of them as tangible, almost sacred objects of knowledge. We gave that up for ubiquity and convenience. While it’s still possible to get a sense of book-making quality from the Folio Society folks (http://www.foliosociety.com/), the reverence for reading, for knowledge elegantly encased in something wonderful to hold, is already gone. And don’t tell me that’s just being old. The late Steve Jobs obsessed over the look of his tools as much as he did anything. Appearance does matter.

As we lose what we have known to what rising generations will never come to know, we have to weigh that loss. Is the substitution better for everyone? When books were scarce a thousand years ago, those who had them knew them by heart, literally. Today, books are everywhere, but reading skills decline and illiteracy abounds. We know that young people cannot read on screens as well as they read in print. We also know that while Google may not be making us stupid (http://bit.ly/cXNeCU), it isn’t exactly increasing our collective intelligence either. Are these things — declining reading skills, weakening concentration, digital distractions — merely phenomena of change and transition, or are they indicative of something more sinister about the digital environment? We don’t know now, but we are going to find out, for better or for worse. Is it a good idea to cast off the last life preserver, the last life boat for something we are sure is — must be — invincible? For those too young to remember, the last time we did that had a rather titanic and terrifying outcome.

Will the Internet successfully replace libraries? Not yet, but eventually.

Meanwhile we rush headlong to replace what has worked wonderfully well for millennia for what has yet to work as we had hoped for even half a decade.

Frankly, I’m perfectly willing for the two to exist side-by-side until we know for certain what future we really want, and the one we must have to vouchsafe our intellectual and cultural futures.
