FHWA TECHNICAL INITIATIVES

Eddie Curtis, P.E.
FHWA Office of Operations / Resource Center
Arterial Management Program

Program Vision:
Arterial facilities are **consistently operated** to achieve maximum efficiency and safety for all users.

Strategies & Tools:
- Research
- Guidance & Training
- Outreach
In Class Quiz

On your own please write in 25 words or less:

Your definition of “Traffic Signal Operations”

• No discussing this with your neighbor!
• This will be anonymous!
• Hand it in,
Research

• Evaluation of Advanced Traffic Signal Management Systems (ASCT)
• Managing the Performance of Traffic Signals
• Regional Traffic Signal Operations Programs
• Signal Timing Under Saturated Conditions

• Adaptive Control Software
  – ACSLite
  – RHODES
  – OPAC
  – RTACL
Background

**TRANSPORTATION INFRASTRUCTURE**

Benefits of Traffic Control Signal Systems Are Not Being Fully Realized

United States General Accounting Office

Report to the Chairman, Committee on Energy and Commerce, House of Representatives

March 1994

**HIGHWAY CONGESTION**

Intelligent Transportation Systems’ Promise for Managing Congestion Falls Short, and DOT Could Better Facilitate Their Strategic Use

United States Government Accountability Office

Report to Congressional Committees

September 2005
Guidance

- Model Systems Engineering Documentation for ASCT
- Improving Traffic Signal Management: A Basic Service Concept
- Regional Traffic Signal Operations Programs
- Signal Timing Under Saturated Conditions
- Signal Timing on a Shoestring
Training

- Managing Traffic Signal Systems (TSS) Basic Service Model
- Evaluating the Performance of TSS
- Applying Systems Engineering To TSS
- Traffic Signal Timing Concepts
- Mobile Hands on Signal Timing Training
- Traffic Signal Design & Operations
- Computerized Traffic Signal Systems
Outreach

- Every Day Counts
- Traffic Signal Report
- NTOC Traffic Signal Library & User Forum
- Professional Organizations
  - ITE
  - IMSA
  - APWA
- LTAP
Traffic Signal Report Card 2011

• http://www.ite.org/selfassessment/
• New and Improved
• Built around specific operational objectives

Deadline
December 15th
Better, Faster, Smarter

Shortening Project Delivery
- Planning & Environmental Linkages
- Legal Sufficiency Enhancements
- Expanding Use of Programmatic Agreements
- Use of In-Lieu Fee and Mitigation Banking
- Clarifying the Scope of Preliminary Design
- Flexibilities in ROW
- Flexibilities in Utility Accommodation and Relocation
- Enhanced Technical Assistance on Ongoing EISs

Technology Innovation
- Warm Mix Asphalt
- Precast Bridge Elements
- Geosynthetic Reinforced Soil
- Safety Edge
- Adaptive Signal Control Technology \(\text{ACSLITE}\)
What Do Motorists Want?

• “Why do I have to wait when there’s nobody else moving”
  – Translation: Equitable distribution of green time

• “Can’t I just drive down the street?”
  – Translation: Progression—driving through successive greens
Traffic Signal Performance

Operations

Trigger Event
Data Collection
Modeling / Optimization
Implement & Fine Tune
Reporting
Variability is Normal—And the Problem
The Big Box Scenario – Year 1
Year 10
Adaptive Signal Control Technology

1. Monitor Traffic
2. Evaluate Performance
3. Update Timing

- Trigger Event
- Data Collection
- Modeling / Optimization
- Implement & Fine Tune
- Reporting
$$d = d_1(PF) + d_2 + d_3$$

**Benefits**

- Variability in Demand
- Delay

*Do Nothing*

- Periodic Retiming
- Constant Monitoring & Fine Tuning (ASCT)

**Retiming Costs**

**Variability in Demand**

**Delay**

**Complaints**

*Source: City of Alpharetta*
Adaptive Signal Control Technology

• Better
  – Benefits to Road Users & Agencies
  – Ongoing performance measurement

• Smarter
  – Solves problems that are difficult to address with time-of-day and traffic responsive
  – Saves cost of mundane data collection and retiming

• Faster
  – Reduces retiming intervals from years to minutes
ASCT Deployment Status

Source: Aleksandar Stevanovic, Florida Atlantic University
Readily Available ASCT

- ACSLite
- BALANCE
- InSync
- LA ATCS
- MOTION
- OPAC
- RHODES
- SCATS
- SCOOT
- UTOPIA

- QuicTrac
- NWS Voyage
- Multi-criteria Adaptive Control
- KLD
- Intelight
- Synchro Green
- System of the Month
Barriers to Adoption

• Stakeholder Meeting

• Complexity
  – Model Systems Engineering Document for ASCT

• Cost
  – Planning for Operations
    • Align Arterial Operational Objectives with Planning Goals

• Uncertainty about Benefits
  – Supplement Traditional MOEs
    • Arrivals on Green
    • Green time Utilization
The Vision

Adaptive Signal Control Technology (ASCT) used as an operations strategy where traffic demand and agency capabilities support implementation.

- Goal: The EDC / ASCT tools are used to guide the implementation or programming of 40 ASCT systems.

- EDC / ASCT tools
  - Systems Engineering Process
    - SE Model Documents
    - SE Workshop
## EDC Resources

<table>
<thead>
<tr>
<th>Outreach</th>
<th>Guidance</th>
<th>Training</th>
</tr>
</thead>
</table>
| • Systems Engineering Workshops | • Model Systems Engineering Documents  
• MOEs and Evaluation Procedures (May 2012) | • Systems Engineering for ASCT (July 2012)  
• Evaluating the Performance of ASCT (July 2012)  
• Traffic Signal Timing Concepts (July 2012)  
• Developing Traffic Signal Management & Operations Plans: Basic Service Concept (July 2012) |
Possible Approaches

• Consumer Reports
  – Evaluate Available Technology
  – Consult with vendors / Distributors
  – Deploy small scale system
  – Evaluate
  – Abandon or Expand

• Systems Engineering
  – Objectives
  – Needs / Constraints
  – Requirements
  – Design
  – Implement
  – Verification
  – Validation
  – Abandon or Expand
What are the Risks - ASCT?

• Problem could be solved with other strategies
• Functional Objectives of the system do not align with agency objectives
• Loss of other critical functions / features
• Constraints not properly addressed
• Cost
• Maintenance
Other Risk Issues

• Technology NEW to most
• Technology still evolving
• Most systems have very limited track record
• Documented history of failed ASCT projects (40%)
• Significantly increased complexity
• Extremely dependant upon other stuff
  – Communications systems
  – Detection
  – Staff
• Not “one size fits all”
• Often pitched as silver bullet
The Role of Systems Engineering

Understanding the problem

- Projects getting bogged down with shifting requirements
- Acquisitions being challenged by unsuccessful bidders/proposers/vendors
- Projects not meeting agency needs

Managing risk

+ it is mandatory for federal-aid projects
Basic Systems Engineering Deliverables

• Concept of Operations
• Requirements
• High Level Design
• Verification Plan
• Validation Plan
Model Systems Engineering Document for ASCT Systems

• Purpose of the Document
• How to use the Document
• Document Organization
Purpose of SE Model Documents

• Evaluate need for Adaptive Control
• Usual process too much work for small projects...
• ...but small projects still impose big risk to small agencies
• Model documents greatly reduce effort by providing wording and documentation...
• ...but agencies still must identify their needs
Model Document

Process

Answer a series of questions
• Questions that will be important during design
• Guidance for answers to questions include concept of use
• Answer link to scenarios and requirements

Evaluate constraints
• Would relieving a constraint allow better answers?

Ask questions again with different constraints
What are my next steps?

I manage a large city, with over 1000 traffic signals, I'm considering adaptive signal control for some intersections, but how do I determine the right place for adaptive?

I'm a technologist and want to use the latest and greatest. I just heard about adaptive control and it sounds great, I want one! What do I do next to get it?

I have very old traffic control system and with my recent grant I think I can afford a new system. Is it time to consider adaptive control?

I have tried time of day coordination and even traffic responsive plan selection, but I feel like there could be something better. Could adaptive control be a better solution?

Due to new air quality standards that are out, I need to improve my network. Is it time to consider adaptive control?

I been working with my consultant/vendor for many years and they have been telling me about new adaptive traffic control systems that I should consider. What locations would be the best fit for an adaptive control system?

I am getting calls on a couple of my intersections and I cannot solve the cycle/phase issues. Will adaptive control help?

I have a corridor that I run time of day coordination, but occasionally diverting traffic overwhelms the corridor, could adaptive control provide a better solution?

The planners are telling me that in the next 5-10 years there will be a 50% growth along the main corridor in the city, the current traffic control system will not handle the traffic based on the current capacity. Is it time to consider an adaptive control?
What are my current situation, needs, goals, and objectives? (Traffic & inventory)

In absence of adaptive control, what more could I do to optimize my current system? What limitations would remain?

Select closest situation and problem statement. OR Create custom problem statement

What scenarios will fit my current and future traffic situation? Will I need to generate custom scenarios?

Identified and defined traffic issues

Deficiencies in existing System (Part A)

Situation and problem statement

Check list, instructions

Pre-defined Scenarios

User defined Scenarios

Envisioned (to-be) concept for adaptive control

What will I need to prepare for adaptive control?

Which type of adaptive control is best for me?

Evaluating existing adaptive control systems

What scenarios will fit my current and future traffic situation? Will I need to generate custom scenarios?

Check list, instructions

Pre-defined Scenarios

User defined Scenarios

Envisioned scenarios include Fault scenarios

Top level requirements for operations (user requirements)

System requirements

Check list, instructions

Compare Requirements and product characteristics

How can I make sure the system will work per the stated requirements?

How can I determine that the system fulfills my needs?

Verification tests

Validation tests

Implement System
Questions

- Section 4.8.1 Network Characteristics
  - What is the size of the network that needs to operate adaptively, both now and in the future?
