## 1979 PRICE REPORT

by

William L. Hoover  
Assistant Professor of Forest Economics and Finance

Delivered log prices moved up broadly during the April 1978 to April 1979 period. The only noticeable exception was red oak veneer logs in the smaller size classes and large select walnut veneer logs. White oak continued to lead the upward price movement. Ash also continued to show strength.

Sawlog prices were up about 10% overall. The prime grade was up an average of 14% overall, led by red oak, the other oaks, ash, and cottonwood. No. 1's were up an average of 10% led by white oak and ash. No. 2's and 3's were up 7% and 8% respectively. The trend for large price increases for the smallest and lowest grade of walnut logs continued. No. 1's walnut logs jumped 19%. These trends are consistent with lumber markets and the dwindling supply of walnut timber. The supply of white oak timber in the larger and higher grades still appears sufficient to attract increased log supplies by increasing prices.

Veneer log prices were up about 13% overall. Prime white oak was up about 40% overall and select about 25%. Red oak was mixed but generally off. The large prime logs continued to show strength, but the small lower grades were off by as much as 32%. Black walnut was up 14% overall in the prime grade but only about 1% in the select grade. The small selects showed the greatest increase and the large selects the greatest decrease. Since the small selects dominate the market the actual market average was up significantly. Tulip poplar showed little activity. The actual trend is probably a price increase sufficient to cover the increase in producer costs.

Little activity was reported for miscellaneous products such as container veneer, and handle logs and bolts. Hickory handle logs brought about \$180. White ash and hard maple brought about \$300. No. 5 crossties brought about \$700 and No. 2's about \$330. One piling log buyer reported prices. The price given was well over \$100.

The prices reported for custom work appear to be in line. Custom sawing varied between \$150 and \$45 for the 35 mills responding. The average was \$89. Logging prices varied between \$80 and \$15 for the 9 operators reporting. The average was \$48. Hauling costs varied between \$80 and \$25 for the 6 operators reporting. The average was \$42. This indicates that on average it cost \$90 per MBF to convert standing timber into logs delivered to a mill.
