Founded in 1798 in London, Taylor & Francis is one of the oldest continuously publishing, privately held STM publishers in the English language. Committed to the dissemination of scientific information, Taylor & Francis' non-executive board members have always included eminent scientists and academicians with the current board being comprised of a nobel laureate and four members of the Royal Society. Throughout the 19th century, Taylor & Francis focused on its printing business and journal publishing. It was not until the later portion of the 20th century that Taylor & Francis created a complimentary book publishing division. With offices in both the UK and the USA, Taylor & Francis now employs approximately 200 people.

Taylor & Francis publishes extensively in physics, engineering, education and the social sciences, with its physics journal *Philosophical Magazine* being perhaps the best known publication. Taylor & Francis is a recognized leader in ergonomics, geographical information systems and remote sensing, heat transfer engineering, thanatology and educational research.

In North America, Taylor & Francis also acts as the exclusive agent for a distinguished list of English language foreign publishers: Open University Press, Multilingual Matters, Jessica Kingsley Publishers, Paul Chapman Publishers, David Fulton Publishers, Swets & Zeitlinger, Melrose Press and Dodwell Marketing Consultants.

In recent years Taylor & Francis has concentrated on publishing books of enduring value in the physical sciences and social sciences and has supplemented this monographic publishing activity with the publication of significant reference works with a partial listing including: *The Encyclopedia of Human Rights*, *The Encyclopedia of the United Nations, 2nd Edition*, *Blacks in Science and Medicine*, *The Heat Exchanger Design Handbook*, *Physical and Thermodynamic Properties of Pure Chemicals* and to be published this summer, in association with the Rachel Carson Council, *A Basic Guide to Pesticides*.

Taylor & Francis prides itself on its fidelity to its mission which is to remain an independent publishing voice providing an outlet for scientific information of distinction and the dissemination of it throughout the world. We here at Taylor & Francis have an enduring commitment to both the scientific and academic community and we welcome contacts of any kind, either directly to our offices, or to our staff during the numerous conferences (professional and library) that we attend.
