Publisher's Profile

Column Editor: **Matt Nauman** (Blackwell North America)

Princeton University Press

41 William St.
Princeton, NJ 08540
Tel: (609) 258-4900
Fax: (609) 258-6305

ISBN Prefix: 0-691

Officers:

Walter Lippincott, Director
Patrick Carroll, Chief Operating Officer
Emily Wilkinson, Editor-in-Chief
Adam Fortgang, Marketing Director
Eric Rohmann, Sales Director

Vital Statistics:

Number of Employees: 84
1994 estimated number of books to be published: 200
In print titles: 3,500

Princeton University Press was incorporated in 1910 and published its first book in 1912. Over 4,500 books have been published since then. In 1965 the Press launched its paperback program, one of the most extensive in university publishing. To date, approximately 1,500 Princeton University Press hardcover books have been reissued in paperback.

Besides the offices and warehouse in New Jersey, the Press has a European selling and distribution office, which serves Europe and the Middle East. Princeton University Press is a leader in scholarly publishing, with an emphasis on quality trade titles as well. Recent and forthcoming titles include *The King of Inventors: A Life of Wilkie Collins*, *Making Democracy Work: Civic Traditions in Modern Italy*, *History and Geography of Human Genes*, *The Love Letters of Luigi Pirandello to Marta Abba*.

Among the Press's distinctive series are:

Bollingen: The Bollingen series contains the *Collected Works of C.G. Jung*, and lasting works in world mythology, anthropology, literary criticism, art history, and archaeology.

The Collected Papers of Albert Einstein: *The Collected Papers* are selected from more than 43,000 documents, 2,000 of which were discovered by the editors. This series will provide the first complete picture of a massive written legacy.

The Papers of Thomas Jefferson: A projected 60-volume series including documents of historical significance as well as private notes not closely examined until their publication in the *Papers*.

Papers of Woodrow Wilson: These volumes contain a wide and unprecedented selection of letters, speeches, manuscripts, articles, and selections from books, in a strict chronology.

The Illuminated Works of William Blake: Published in arrangement with the Tate Gallery and the William Blake Trust, these five facsimile volumes are newly and meticulously photographed. ☞

school student." [We are tempted to ask, Will more prisons make the U.S. more competitive in the world?] See *The New York Times Magazine*, February 20, 1994, "America's Best Buildings," pp. 38-40.]

Is there an erroneous perception that the library will always have the information, that valuable information will continue to be collected and presented in a viable format, that somehow the downward spiral of the library's collection will end? Does society, do governments and corporations realize the risks and

consequences here? ["... some scientists are deeply disturbed by this trend. They say lack of jobs, and declining national support of science when the puzzles yet to be solved are more and more difficult, have begun to sap the vigor of American research." Nobel Prize (1986)-winning chemist, Prof. Dudley Herschbach of Harvard, comments, "The government providers of science funding no longer seem supportive of free, basic research and wild ideas that can lead to great science and wonderful applications." (We might ask, Isn't basic research one of the "engines" that drives the U.S. economy? What happens when promising U.S. or Canadian scientists

are not able to go forward with their careers/research?) See *The New York Times*, February 20, 1994, "End of Cold War Clouds Research as Openings in Science Dwindle," by Malcolm W. Browne, p.1.]

At any rate, a reality check indicates that the STM community needs to issue a wake up call for society, governments, corporations, students, administrations, or we may discover the day (not too far in the future) when the North American STM community will have eroded to a mediocre image of its once first-rate achievements. This is not a happy thought to pass along to our children and grandchildren. ☞
