The attached Progress Report No. 96 on Traffic Speeds is the report of the January-March quarterly study of free-flowing automobile and truck speeds on rural, tangent, level sections of Interstate, 4-lane and 2-lane and on urban interstate highways in Indiana. The report has been prepared by Mr. A. A. Gadallah, a Graduate Instructor in Research on our staff, under the direction of Professor H. L. Michael. The data were collected by Mr. G. K. Stafford and a number of graduate assistants on our staff.

The results indicate a decrease of about 0.6 mph in the average speed of all passenger cars and heavy trucks to that of the October-December 1975 Study. This decrease occurred largely on 2-lane roads with a slight increase measured on rural interstate highways.

Copies of the report will be sent to the Federal Highway Administration and the ISHC for review, comment and acceptance as fulfillment of the objectives of this HPR Part I Study. Copies of the report are requested for release to the Indiana State Police, the Indiana Traffic Safety Council and the Indiana Office of Traffic Safety as a normal procedure for these reports.

Respectfully submitted,

Harold L. Michael
Associate Director

TRAFFIC SPEED REPORT NO. 96

This report is an analysis of spot speed observations made during February and March 1976. All observations were made of free-flowing vehicles on level, tangent sections of rural and urban highways during daylight and under favorable conditions. Seven stations were studied from the same locations on selected Federal and State highways as used in the previous annual studies.

Stations were classified as two-lane, four-lane, rural interstate, or urban interstate highways. A representative sample of spot speeds was obtained at each station in each classification. The site locations were as follows: (See Figure A)

Rural Interstate Highways

*1. I-69	3.3 miles south of Junction of SR 18
*2. I-65	1.0 miles west of Junction of SR 334
3. I-74	1.0 miles east of Junction of Post Road
4. I-65	7.5 miles north of Junction of SR 160

Four Lane Highways

5. U.S. 31	1.2 miles south of Junction of SR 38
*6. U.S. 30	2.0 miles east of Junction of SR 49
7. U.S. 41	1.0 miles north of South Junction of SR 2
*8. U.S. 52	1.0 miles west of Klondike

Two Lane Highways

*9. U.S. 35	1.5 miles east of Junction of I-69
10. S.R. 43	2.0 miles south of Chalmers
11. U.S. 231	1.0 mile south of Junction of SR 234
*12. S.R. 25	0.7 miles west of Americus

Urban Interstate Highways

FIGURE A LOCATIONS OF SPEED-STUDY STATIONS

The vehicles were classified as Indiana or Non-Indiana Passenger Cars and Light (less than 5000 lbs. gross weight) or Heavy (equal to or more than 5000 lbs. gross weight) Trucks. The analysis was performed as classified and combined, passenger cars or trucks.

The maximum speed limit in Indiana is 55 miles per hour, both on Interstate and other rural highways.

Equipment and Field Procedure

The observations for this study were obtained by use of an "Electromatic" Radar Speed Meter. The meter was placed approximately four feet from the edge of the pavement at angles less than 10° with the highway center line. No corrections of speeds were necessary at these small angles. At the beginning of the study the accuracy of the meter was checked and any constant discrepancy of readings was corrected accordingly.

RESULTS OF ANALYSIS

The data collected were analyzed and are summarized in Tables 1 to 7 in the Appendix. Tables 8, 9 and 10 summarize the data for rural interstate, four lane and two lane highways, respectively. Table 11 is the summary for all highways. Tables 12 through 19 are summaries in an FHWA format which is desired. The average speed for each classification of vehicles on each type of highway for this study was as follows:

Summary and Conclusions

The overall average speed for all vehicles and passenger cars in this study was found to be 56.8 mph and 57.3 mph, respectively. The overall average speeds for heavy trucks and for all trucks were found to be 54.9 mph and 55.6 mph, respectively. These overall average speeds are 0.6 mph, 0.5 mph, and 0.7 mph less for all vehicles, passenger cars, and all trucks, respectively, than the results of October-November 1975.

Table A presents a comparison of the overall speed results with that of the previous two studies. The 85th percentile speed of passenger cars was about the same as that of the October-November 1975 study on all highways, and decreased 1.9 mph from the July-September 1975 annual speed study to 61.5 mph.

A comparison of February-March 1976 speed data with that for other recent periods for several types of highway for passenger cars and trucks is shown in Tables B, C and D. The data for the May-June 1975, October-November 1975 and February-March 1976 periods are for only a portion of the stations.

The reduction in the average speeds and 85th percentile speeds occurred mainly on two-lane highways (as compared to the October-November 1975 study). On the other four-lane highways a slight decrease occurred for the average speeds and the 85th percentile speeds. However, a slight increase occurred for the average speeds and the 85th percentile speeds on interstate highways.
