Reports of Meetings — 28th Annual Charleston Conference

Issues in Book and Serial Acquisition, “The Best of Times ... The Worst of Times,” Francis Marion Hotel, Embassy Suites Historic District, and College of Charleston (Addlestone Library), Charleston, SC, November 5-8, 2008

Charleston Conference Reports compiled by: **Ramune K. Kubilius** (Collection Development / Special Projects Librarian, Northwestern University, Galter Health Sciences Library) <r-kubilius@northwestern.edu>

*Column Editor's Note: Thank you to all of the conference attendees who volunteered to become reporters, providing highlights of so many conference sessions. In this issue, we are providing the fifth and final installment of 2008 Charleston Conference reports. Visit the **Charleston Conference Website** for handouts and presentation outlines from many conference sessions. — RKK*

Concurrent Sessions 3 — Friday, November 7, 2008

National Science and Technology Library of China: Leading the Way in Technical Information Resource Collection — Presented by **Mr. Jiancheng Zheng** (Vice Director of Collection Development Department, National Science and Technology Library, China)

Reported by: **Ramune K. Kubilius** (Northwestern University, Galter Health Sciences Library) <r-kubilius@northwestern.edu>

The fascination with the Chinese library and publishing scene was evidenced by the variety of attendees-librarians (a few originally from China), publishers (some already working with Chinese libraries, some investigating the possibilities). Not indicated in the program, and initially a bit confusing to newbies in this area, was the presence of two additional persons who joined speaker **Zheng** at the front of the room. They were from Philadelphia-headquartered **Charlesworth Group** (service/marketing agents for China). CEO **Adrian Stanley** provided background information and Marketing Coordinator **Dan**

I Hear the Train A Comin' from page 67

infrastructure (to house and distribute physical objects) to managing services (applied to digital objects), which are largely provided by infrastructure offered externally. Libraries are no longer judged by the size of the library or the number of print volumes they hold. Rather, they are assessed on the quality of the services they provide to connect their constituents to the right information when they need it. **Kevin** stressed that the key to succeeding in this new environment is nailing the services where the library (or the press, or any other local actor) has a unique advantage. He cited **IBM** as a possible case study, which has managed to transform a good part of its business from being capital driven (selling computers, especially mainframes) to becoming a business services provider. **IBM** is now a problem solver using technology, with more than 50% of their revenues derived from services. Libraries would be well-served to look at **Big Blue** as a model for transitioning their core business. The successful libraries will be the ones that develop and adapt their services, models, and approaches to further the goals of both their local institutions and the scholarly communication space globally.

As a quick editorial aside, I must commend not only **Douglas Armato** and **Kevin Guthrie**, but also the audience at the Train-LIVE session. All parties brought their “A” games, and the result was a lively and free-wheeling plenary that gave us an interesting peek at the challenges and opportunities our industry faces in this rapidly changing environment. 🍷

Yang served as an “ad hoc” translator, when one was needed, but by and large **Zheng's** detailed presentation on its own merit provided a thorough overview of the complex structures that make up the **NSTL** — the nine academies/institutes, the decision-making council, two expert committees. **NSTL** concentrates primarily on STM. Print collecting still takes place but the current priorities are digital and preservation issues. Licenses with international publishers are crafted carefully, keeping in mind the responsibilities and rights of publishers, providers, and preservers. The Q&A segment raised comments, e.g., “we must guarantee access no matter what happens,” analogous to a “Chinese Portico” (natural disasters cause breakdowns in communication networks with the world, “tsunami trigger events”). It was also clarified that **NSTL** is a government body focused on STM, but other private consortia exist, such as **CALIS (China Academic Library and Information System)**, consisting of over 100 members and largely focused on humanities and literature.

Developing a Library Collection Development Allocation —

Presented by **Jeff Bailey** (Assistant Library Director, Arkansas State University); **Linda Creibaum** (Acquisitions Librarian, Arkansas State University)

Reported by: **Rita M. Cauce** (Florida International University, Green Library) <caucer@fiu.edu>

Deciding on how to allocate the library's resource budget across the university's programs is a topic of much debate in collection development departments. In this presentation the speakers described the formula used by **Arkansas State University** to distribute funds throughout the academic departments.

Arkansas State University has approximately 10,000 students, five PhD programs, and is experimenting rapid growth. The library does not have a book approval plan. Prior to using an allocation formula, almost 30% of the collection development expenditure was going to one department, mainly to journals. Funds had not been redistributed in many years. A task force was created to research current use of allocation formulas. The decision was made to base their formula on the one used by **Colorado State University**, and to run a single formula for books and journals. The factors used in the formula: semester credit hour production (actual enrollment), number of classes offered, degrees awarded and their levels, number of faculty per department, average cost of materials.

Before the formula is applied to the available budget, funds are set aside to cover interdisciplinary databases and other general library expenditures. Academic programs are advised as to how much of their allocation is needed to continue their current recurring costs and it is up to them to discontinue any they would rather not continue funding. The added benefit to this process is the active participation of the departments in collection development, including review of recurring costs.

Don't wait for the grapevine when you can find out ONLINE.

KEEP YOURSELF INFORMED OF NEW TITLE RELEASES EACH MONTH WITH OUR ONLINE NEW TITLE SELECTION PLAN.

Want to get new title information even faster? Now you can.

At Emery-Pratt, our number one job is to make your life easier. So we're offering the "New Title Selection Plan" an online program that will let you see the newest book releases 1 to 6 months in advance, right from the convenience of your computer. Your Selection profiles can be easily created and customized for complete flexibility on our web site at www.emery-pratt.com by publisher, author, BISAC subject code, or LC Class Number. These selection profiles can be added, edited, or deleted by you at any time. Best of all, when you see a book you want, you can order it immediately online for fast turnaround.

Finding the latest book at the best price is what we do.

No more researching to find out what's new. Just keep an eye on your e-mail and rest assured that you'll be notified as soon as a new book is available.

THE NICEST PEOPLE IN THE BOOK BUSINESS

Our New Title Selection Plan is just another way we're working to make your book purchasing fast, efficient, and fun.

And They Were There from page 68

The E-book Challenge: From Start to Finish, and Beyond — Presented by **David Hellman** (Collection Development Coordinator, San Francisco State University); **Ya Wang** (Electronic Collections Coordinator, SFSU); **Jay Henry** (Director, Business Development, Blackwell Book Services)

Reported by: **Christine Ross** (University of Illinois at Springfield)
<cmross1@uis.edu>

This presentation offered **San Francisco State's E-Book Acquisition Project** as an example of steps and possible pitfalls that other libraries may want to follow and avoid when embarking upon their own eBook acquisition endeavor. The first speaker laid the groundwork as to why the college decided to start purchasing eBooks. Then the presentation became much more subjective and less informative as each of the technical steps, specific to this college's ILS, were outlined in meticulous detail. The presentation wrapped up with questions for the eBook rep and the panel. While it was a learning experience for the staff of **San Francisco State**, the audience may not have walked away with much useful information.

Here Today, Gone Tomorrow? New Models for Preserving Electronic Scholarship — Presented by **Eileen Fenton** (Executive Director, Portico); **Daviess Menefee** (Director, Library Relations, Elsevier); **Els van Eijck van Heslinga** (Program Development Manager); **Elizabeth Dulabahn** (Director of Integration Management, Office of Strategic Initiatives, National Infrastructure Information Preservation Program, Library of Congress)

Reported by: **Cheryl S. McCoy** (University of South Florida)
<cmccoy@lib.usf.edu>

Digital preservation is not simply reformatting from print to digital or providing byte storage to back up print resources. It is necessary to think beyond current practices because long-term success of digital preservation will require cooperation in order to assure enduring content that has discoverability, authenticity, usability, and accessibility.

Who will be involved?

Will international collaboration be needed (or possible) to address the growing digital preservation challenge? We are saving the output of our own country on Websites but we are losing access to other valuable collections, particularly statistics. The **Library of Congress** has established exchange programs with foreign countries in order to obtain publications but time zone differences, international calls, transfer of monies, etc. make it hard to share funding resources.

How will preservation activities be organized and distributed?

How can preservation work be distributed? What preservation work must be done locally? Which preservation tasks can be distributed? Concrete proposals will be put on the table to discuss the subject and will focus on layers — the standards, the content space, and the problems involved in keeping it together. No one has the answer at this point. What are the key digital preservation challenges and opportunities that face publishers, libraries, and archives as we look ahead 5, 10, 50 years?

The Role of More Accurate Acquisitions Data in the Shift from Print to Digital Format — Presented by **Sarah Pomerantz** (Acquisitions Librarian, Adelphi University); **Andrew White** (Associate Dean, Adelphi University)

Reported by: **Meg Atkinson** (SLIS Student, University of South Carolina) <margaret.atkinson@comcast.net>

Adelphi University is a medium-sized, liberal arts institution in Garden City, NJ with three satellite campuses. There are libraries at all four sites, nearly 650,000 volumes, 805 microforms, 27,000 AV materials, over 30,000 electronic journal titles, and 165 databases.

continued on page 70

And They Were There from page 69

When **Pomerantz** began her position at **AU**, she noticed that since the Acquisitions structure had been created quite a few years before, there had been a shift in information formats from print to electronic. Among other things, there was quite a bit of redundancy present in the old form types and there was a lack of consistent placement for digital materials within the old fund accounts. **Pomerantz** realized that there needed to be a complete overhaul of the Acquisitions module and took her recommendations to **White**. The importance of accurate financial data is to have knowledge of available funds, being able to track encumbrances, and to anticipate annual expenses for renewals. Accurate data provides financial statistics, budget management, and accountability and justification. All fund codes had to be collapsed and then blown back out so that they would not only correspond to the new library fund accounts, but with university accounts as well. Under the new structure, acquisition data has improved with clearly defined fund account codes, subscriptions are encumbered, digital collection resources are paid in acquisitions, and codes now exist for digital resources. Future considerations for this project are reporting with proper assignment of HEGIS codes, prediction of FY needs based on annual renewal costs, and a shift in funds from firm orders to digital renewals for eBook access models.

A Far, Far Better Place: Adapting to Change in Technical Services

— Presented by **Laura Kinner** (Director of Technical Services, The University of Toledo); **Alice Crosetto** (Coordinator, Collection Development, University of Toledo); **Lucy Duhon** (Coordinator of Electronic Resources/Serials Librarian, University of Toledo)

Reported by: **Katherine L. Latal** (University of Albany)
<KLatal@uamail.albany.edu>

The three presenters used clever illustrations to the delight of the attendees who filled the room beyond capacity. According to **Crosetto**, technical services experienced the worst of times in recent years due to staff and budget reductions, coupled with increasingly complex work, technological changes, and a more team-focused, less hierarchical environment. Recognize that staff may reflect characteristics unique to their generation: Silent Generation, Baby Boomer, Generation X, and Millennial. As **Duhon** noted, technical services faces the dual challenge of an aging workforce and changing technology. Know your staff in order to use their talents and abilities wisely and to move and retrain staff. Libraries must provide current content to keep the library relevant to its educated, mobile, and diverse users. Technical services must innovate and take part in the ongoing changes, advocate for the library, listen to younger staff and incorporate the wisdom of seasoned employees, collect input from users and be visible. **Kinner** recommended planning for the future: involve all groups; create a time line; require mutual respect; let all be heard; include succession planning; blend contributions from each group; gather data and analyze it; get rid of the old and move forward.

New Platforms for Delivering and Distributing Content — Presented by **Linda Vendryes** (VP, Channel Development, Ingram Digital) (The originally scheduled speaker was **Rich Rosy**, VP & GM, Institutional Solutions, Ingram Digital)

Reported by: **Cathy Green** (SLIS Student, University of South Carolina) <greenca@mailbox.sc.edu>

Librarians have several options for getting content, across a variety of providers and platforms. **Vendryes** identified six options, with an analysis of their strengths and weaknesses. Publisher direct can offer the best price, brand and subject coverage but with limited content and need to buy all for the best price. Journal aggregators have a single point of entry, strong metadata and the biggest bang for the buck. Distributors provide physical and electronic access and acquisition, with standing orders, but can be focused on print delivery. eBook aggregators present a single search platform with multiple publishers, flexible pricing and limited subject access. Federated search tools can be tough to implement successfully, with great theory but poor execution and technical limitations. Search engines have good name recognition and wide acceptance, with endless search both a plus and minus, and the issue

of providing a democratic search interface vs. accommodating smart users. **Vendryes** concluded with a discussion of library and publisher trends, including expansion of user access and offerings (while not expanding shelf space), more flexible pricing models, eBook support for user annotations, and the effect of digital rights management (DRM) techniques like flow control on access.

Plenary Session — Friday, November 7, 2008

OA Exposed! — Presented by **Arend Kuester**, Moderator (Director, PCG Europe); **Ralf Schimmer** (Head of the Department of Scientific Information, Max Planck Digital Library); **Richard Luce** (Emory University); **Wim van der Stelt** (Executive Vice President Business Development, Springer); **David Hoole** (Head of Brand Marketing and Content Licensing, Nature Publishing Group)
(Substitute speaker: **Charles “Chuck” Eckman** (Associate University Librarian & Director of Collections, University of California—Berkeley attended instead of **Ralf Schimmer**.)

Reported by: **Anna Fleming** (Northwestern University, Galter Health Sciences Library) <a-fleming@northwestern.edu>

Moderator **Kuester** began by reading comments from **Schimmer** who could not attend and urged publishers to look at OA as an opportunity and not to fear the financial impact. **Eckman** talked about **Berkeley’s BRII (Berkeley Research Impact Initiative)** pilot project co-sponsored by UC Berkeley’s Vice Chancellor for Research and the University Librarian. **BRII** variably subsidizes author fees toward OA publications to support campus researchers who want to make their journal articles free to all readers immediately upon publication. **Eckman** considers such support in line with libraries’ public service mission. **Hoole** reported that **NPG** is exploring ways to make archiving automatic for its authors and wondered if scholars could get the benefits of text-mining from pre-pubs. He also thought that the business of publishing cannot be ignored. **Luce** called for support of experiments like **SCOAP3** (Sponsoring Consortium for Open Access Publishing in Particle Physics), which supports OA publishing in high-energy physics. **Van der Stelt** thought libraries can and ought to do more to help authors self-archive. He also offered that **Springer** acquired **BioMed Central** to support OA in the life sciences with a proven venture. Q&A was lively, including a question about whether all published research might become freely available eventually. Publishers in the room said no—that the editorial process in particular adds value to the research.

Sessions — Saturday, November 8, 2008

Genius at Work: Top 10 Ideas I Heard (and can copy) at the 28th Annual Charleston Conference — Presented by **Tony Ferguson** (University Librarian, University of Hong Kong)

Reported by: **Ramune K. Kubilius** (Northwestern University, Galter Health Sciences Library) <r-kubilius@northwestern.edu>

Ferguson shared 2008 conference “cool bits of information” and “ideas to copy” that resonated with the audience (those not in Charleston may miss the context). On his “cool” list: The staff will change... (Push, pull them, or are they wet noodles?). Insert “2.0” in as many sentences as possible. When in doubt, practice “digital overlap therapy.” Software, policies, etc. aren’t “user-friendly” when people need training to use them. American libraries have finally decided that eBooks will work. Scholars’ communication seems to be reaching the tipping point, sufficient to make a difference in tenure decisions (a foundation for what libraries are doing). **Microsoft** is moving software into the “cloud,” while **OCLC** plans to move OPAC software there... On **Ferguson’s** “copy ideas” list: Overseas-based folks can use work-around solutions to purchase books online (**amazon.com** U.S. dollar gift certificates). Employ case studies using primary source materials to teach research skills in news and other sources. “Resources aren’t postage stamps,” so “drag people through them.” Post-**Google** agreement: rethink ILL, remote storage. Brainstorm how to regain the trust of students and faculty. Stop teaching information management skills; start teaching textual critical thinking skills. Participate in **Elsevier’s** (funded) ROI study. Promote the single box search option. Today’s students prize informality and “almost is good enough”...

continued on page 71

Converging on Persistence: Steps to an Ecology of Long-Lived Collections — Presented by **Brian E. C. Schottlaender** (The Audrey Geisel University Librarian, University of California San Diego)

Reported by: **Heather Miller** (SUNY Albany)
<h-miller@uamail.albany.edu>

Collections are more and more about what an individual library owns (as opposed to what can be accessed). Thus, preservation is imperative; it is also complex, based as it is on trust. **Schottlaender** noted that **OCLC's Lorcan Dempsey's** focus is on collective, system-wide perspectives and the **Association of Research Libraries** emphasizes strong preservation programs. **Schottlaender** focused on shared facilities, distinguishing between shared repositories and shared collections. In the latter, all decisions are collective. The **University of California** shared collection is a shared distributed collection in which ownership remains with the library while the collection is collectively managed. Trust becomes more complex in varied shared environments such as these and should be formalized in written agreements. He noted also that of the 68 shared high density library storage facilities in North America only 14 are shared and pointed to the **Center for Research Libraries** as the "granddaddy" of cooperative, shared storage which expanded to shared acquisitions, cataloging and delivery as well. He referred listeners to **Michèle Cloonan's** article "The Moral Imperative to Preserve," *Library Trends* (Winter 2007) and **Amy Friedlander's** "Averting a Digital Katrina: Sustaining Trust in the Research Infrastructure," *Educause Review* (July/Aug. 2008).

Introduction for Innovation Sessions — Presented by **JoAnne Sparks** (Assistant Director for Research and Learning Services, Bodleian Library, University of Oxford)

Reported by: **Ramune K. Kubilius** (Northwestern University, Galter Health Sciences Library) <r-kubilius@northwestern.edu>

In 2007 **Sparks** shared examples of innovative measures that she and colleagues had implemented at her previous place of employment at the **Memorial Sloan-Kettering Cancer Center** in New York City. Recently transplanted to the U.K., for the "second annual" **Charleston Conference** "Saturday morning of innovation" in 2008, **Sparks** began her short introductory comments by sharing various definitions of innovation: describing something realized anew; a rediscovery applied in a new or extended way; direct connection with highly valued traditions and provision of "new directions." **Sparks** expressed her admiration for architect **Christopher Alexander** and his "pattern language" ideas for home design, and shared how she has attempted to incorporate them into her new life in an English garden house. To illustrate the many innovations that can be found in the library and information world, **Sparks** showed her own creation, a "desktop of logos" that she had pulled together (and created), innovative "cool know bits": ILS-2, creating a library portal in Blackboard, trigger events, consultations, "Google Gap," access and access, the omnipresent Web, etc.

Innovation Session 1—Saturday, November 8, 2008

Academic Libraries without Print — Presented by **Allen McKiel** (Dean of Library and Media Services, Western Oregon University); **Carol Zsulya** (Head of Access and Distant Library Services, Cleveland State University); **Jim Dooley** (Head, Collection Services, University of California, Merced); **Robert Murdock** (Assistant University Librarian for Collection Development & Technical Services, Brigham Young University)

Reported by: **Ryan Weir** (University Libraries, Murray State University) <ryan.weir@murraystate.edu>

Imagine a library without print resources. What would such a library look like and how would it function? During the forty minute session,

three innovative leaders spoke about their libraries. **Dooley** discussed his library where the idea of the computer lab has been scrapped for a collection of 250 laptops that are available for checkout, and 90% of their resources are only in electronic format. **Murdock** spoke about his library's move from a collection comprised of mainly print materials to one that now includes online journals, databases, eBooks, and print on demand journal services. **Zsulya** shared her library's experiences as they started moving their collection to online formats in early 2001. Between 2001 and 2007, her library has moved from spending 37% of their budget on online resources to 67%. This presentation provided guidance and perspective for the national trend of academic libraries moving towards offering more online content. This session offered insight into three different libraries at three different stages of this process, as well as, practical information and ideas, to help get your library further along the path to a larger electronic collection.

The Evolution of Service: A Technical Services Perspective — Presented by **Helen Heinrich** (Cataloging Coordinator, California State University, Northridge); **Donna LaFollette** (Accounting & Receiving Supervisor, California State University, Northridge)

Reported by: **Meg Atkinson** (SLIS Student, University of South Carolina) <margaret.atkinson@comcast.net>

Faced with the problem of shrinking technical services resources, the Cataloging Coordinator at **Oviatt Library** at **C-SUN** had to decide how to balance user expectations with the price of service. Changes in the workflow were needed and **Heinrich** implemented five components to make it happen: review, revise, reorganize, technology, and collaboration. In the review process, staff members were interviewed, there was an internal and external review, and a cost analysis was completed. Procedures were then revised to reduce duplication and eliminate unnecessary tasks. Quality standards were modified to reflect current reality and cross-training was provided. During reorganization functions were consolidated, communication was reinforced, and fragmentation within the department was eliminated. Staff was encouraged to trust in their colleagues' expertise by changing the expectation from that of a mistake to that of correctness. Leveraging technology to their advantage, they enabled cross-portal searching, automated repetitive editing, and purchased needed equipment. By collaborating with vendors, they were able to implement the open URL system needed for cross-portal searching, changed their output record profile, and began using **PromptCat** for automated copy-cataloging. The ongoing reorganization has had positive results thus far. They were able to "cut the fat" without sacrificing service to users.

Innovating with Purpose: Think Global, Act Local, and Then Give Back — Presented by **Rachel Frick** (Senior Program Officer, Institute of Museum and Library Services); **Elisabeth Leonard** (President, Library Solutions)

Reported by: **Ramune K. Kubilius** (Northwestern University, Galter Health Sciences Library) <r-kubilius@northwestern.edu>

Frick and **Leonard** were innovation cheerleaders, rotating their turns to comment, sharing examples from the "real library world." Do an environmental scan and gather what is our new context-locally and trans-nationally, in the cyberinfrastructure. What's changing in our favor? Our approach to assessment; librarian entrepreneurs; the glut of information, grants that call for scientists to share data and they don't know how, new librarians with new ideas and fresh perspectives. The gardening metaphor: prepare the soil, seed the field, let the flowers bloom, realize that not every seed will germinate, feel the love. Innovation thrives when managers foster and reward it and promote risk-taking. Don't talk only to librarians. The call to action? We need to solve problems, not offer solutions; collaborate more and do it more transparently, think "radical innovation," not just incremental. Innovation should not be on the ashes of librarianship, but on its fundamentals. Session attendees had many questions and comments that continued the rallying cry—"Don't forget the basics." "Look at examples for models in innovation, but not actual applications." "Innovation requires an investment of time, so dip your toe in." "Manage by exception rather than by demand." Let us "truly embed ourselves." "Back to the bibliographer," "Preservation mandate."

continued on page 72

Innovation Session 2 — Saturday, November 8, 2008

Bridging the Google Gap — Presented by **Darrell Gunter**, Moderator (Chief Marketing Officer, Collexis Holdings, Inc.); **Dennis Brunning** (Electronic Resources Manager, Arizona State University); **Sue Polanka** (Head, Reference and Instruction, Paul Laurence Dunbar Library, Wright State University); **Steve Leicht** (COO, Collexis Holdings, Inc.); **Mark Hyer** (Vice President, Science and Technology Publishing, ProQuest)

Reported by: **Ramune K. Kubilius** (Northwestern University, Galter Health Sciences Library) <r-kubilius@northwestern.edu>

Each speaker shared insights on **Gunter's** posed questions: what users require and what currently is innovative. **Leicht**: Sometimes innovation only requires one little step, and the challenge is to use tools better. The "Google gap" won't be bridged, since we won't see the bridge. Faculty communities require: social networking applications, expert and institutional profiles, access to publications faculty wrote in the course of their careers. **Bunning**: The IR enhances a relationship of researchers with librarians, the library has a role in licensed content, publishing management includes dollars, enhance beyond the property, go beyond the search, leverage meta-data. **Hyer**: Need enhanced abstract records and access to tables and figures (information isn't always in captions); keep company secrets until release date (a free social networking tool is forthcoming?). **Polanka**: Users require an "easy button" (find, not search), "my library," discovery layers (pre-index, facet, with complete "2.0" over the top). In answer to the moderator posed question — "Is Google a friend or foe?" panelists shared their views: **Google** is an enabler — Students will find it in **Google**, then make sense of it elsewhere. **Google** can complement other activities: a link resolver can be put into **Google** searches, links to **Google Books** can be placed in ILS records, offer a credit class "Google and the Library," Library Guides 2.0 is a good investment; **ProQuest** microfilms will surface in **Google**.

Innovation Session 3 — Saturday, November 8, 2008

Using Blog Technology to Get Their Attention — Presented by **Audrey Powers** (Associate Librarian, Research Services & Collections, University of South Florida); **Cheryl McCoy** (University of South Florida); **Gina Clifford** (Webmaster, Tampa Campus Library, University of South Florida); **Sue Polanka** (Head, Reference and Instruction, Paul Laurence Dunbar Library, Wright State University) (Note: Listed speaker, **Phil Flynn** (Engineering Librarian, Wright State University) did not present.)

Reported by: **Cordelia Wilson** (SLIS Student, University of South Carolina) <Wilson29209@aol.com>

Polanka shared her experiences in starting, maintaining, and marketing her blog *No Shelf Required*, www.libraries.wright.edu/noshelfre

quired/. Her blog, which is geared toward publishers and librarians, is meant to initiate discussion on eBooks. **Polanka** highlighted several features of her blog, including polls and podcasts of interviews.

Librarians **Powers** and **McCoy** discussed at length the background of the blogs they created (*STM NEWS@USF Libraries*, usflibraries.typepad.com/stmnews/ and *CVPA NEWS@USF Libraries*, usflibraries.typepad.com/arts/) to keep the faculty in the sciences and arts at their university informed of newly added library resources and other news. They also went into the benefits of their blogs, including the enhanced ability to communicate collection development initiatives to appropriate faculty. In addition, they described the challenges associated with the blogs, such as the difficulty in getting others to post. Finally, **Powers** and **McCoy** demonstrated features of the two blogs.

At the conclusion, **Clifford** compared the capabilities and features of three popular hosted blog options — *Blogger.Com*, *Word Press.Com*, and *TypePad.Com*. She considered the level of IT expertise required for each. Next, she offered advice about principles to follow when designing and organizing blogs. **Clifford** also recommended strategies to optimize a blog's ranking by search engines.

Hyde Park Corner Sound-Off — Presented by **Chuck Hamaker** (UNC-Charlotte) and **Katina Strauch** (College of Charleston)

Reported by: **Ramune K. Kubilius** (Northwestern University, Galter Health Sciences Library) <r-kubilius@northwestern.edu>

In this annual **Charleston Conference** session, **Hamaker** and **Strauch** involved sound-off session attendees in a 2008 conference recap (until hotel employees began re-arranging chairs for another event). Speakers identified themselves, voiced opinions. "Lively Lunches" were proclaimed to be lively again and even a "not a morning person" enjoyed the "Beastly Breakfast." New "dine-arounds" and "vendor chats" received mixed reviews, but votes to "try again next year." Conference sessions organized by subject "threads" received a thumbs-up. Of interest: what is the (plenary/concurrent session) selection process "behind the scenes?" The first plenary session (by **Derek Law**) "set the tone"; other plenaries were deemed to be "good, but not exciting or provocative." Some decreed: too much duplication and concurrent session overlap. First-timers enjoyed small group discussions on practical matters, specifics. Trends and "hot in 2008" topics: re-surfacing of pure citation analysis (to judge individuals); differentiating activities best done at local and regional levels; "how to spend less with more," eBooks, and statistics... The conference is: democratic, an opportunity to meet people & network. It breaks down barriers with vendors, broadens horizons, engenders "ideas that are yet to be born in my mind," and it is a "crime not to come each year." One attendee was a "**Katina** and **Chuck** groupie" who comes each year. Conference Website administrators' reminders: stay connected throughout the year, share photographs, "hassle" speakers to send their presentations... 🌿

This concludes the reports we received from the 2008 Charleston Conference. Thanks again to all of the conference attendees who volunteered to become reporters, providing highlights of so many conference sessions. For information about the 2009 Charleston Conference visit the Charleston Conference Website at www.katina.info/conference.

Rumors from page 62

Speaking of names from the past, got an email from the incredibly awesome **Karen Hunter** just the other day! I had just asked the he-keeps-up-with-everything-and-everybody **Chuck Hamaker** what **Karen** was up to and lo and behold comes this email! Magic! Turns out that **Karen** wanted a copy of an article she wrote in the February 1997 *Against the Grain* called

"Things That Keep Me Awake At Night." The article was based on a presentation she made at the **Charleston Conference** in November 7, 1996. And, twelve years later, it is incredibly accurate. **Karen** has promised to update her nightmares for a future issue of *ATG* and believe me I will hold her to it! I am also trying to pin her down to speak at the **30th Charleston Conference** next November. If you see her, be sure and remind her that we are all waiting for her to come back!

I am sure that I have left **Rumors** out!! If I have write me and remind me. And also be sure and check the *ATG NewsChannel* which has many more Announcements and Rumors than we can put in the print edition. www.against-the-grain.com/

I am sorry to say that, thanks to my ankle, I will not be in Boston at **ALA Midwinter**. Y'all have fun without me! In the meantime, much love to you all and **HAPPY NEW YEAR!** 🌿
