The “Need”

Design and Specification Issues

▪ Improper mixture types
▪ Varying RAP/RAS contents
▪ Not enforcing construction requirements
▪ Inaccurate asphalt layer thicknesses

Quality Product at Lowest Cost
APAI LOCAL GUIDE SPEC
What is it?

- Asphalt guide specification for LPA and commercial projects
- Revised in February 2018
- Reference to 2018 INDOT Standard Specifications
- Incorporates NAPA guidelines
- Modified by agency or designer
- Establishes standard of quality

**2018 Recommended Guide Specification for Asphalt Pavements for Local Governments and Non-Governmental Applications**

This recommended specification incorporates the latest asphalt pavement technologies. It attempts to present the best practices, procedures, and processes but is not intended to replace sound engineering knowledge, judgment, and experience.

The Indiana Department of Transportation (INDOT) Standard Specifications, Section 401 – Hot Mix Asphalt, HMA, Pavement dated 2018, shall apply with the modifications as noted herein. Sections numbers refer to INDOT Standard Specifications.

**HMA.01 Description**

This work shall consist of one or more courses of Hot Mix Asphalt (HMA) base, intermediate, surface mixtures, or other miscellaneous HMA application.

**HMA.02 Quality Control**

HMA shall be supplied from a Certified HMA Plant in accordance with Indiana Test Method (ITM) 582 – Certified Voluntary Hot Mix Asphalt Producer Program. HMA shall be transported and placed according to a Quality Control Plan (QCP) prepared by the Contractor in accordance with ITM 469 – Contractor Quality Control Plan for HMA Pavement. The QCP shall be submitted to the Contracting Agency five calendar days prior to commencing HMA paving operations.

**HMA.03 Materials**

P-bitumen for HMA shall be supplied by an INDOT approved supplier in accordance with ITM 582 – Asphalt Supplier Certification (ASC) Program and shall meet the requirements of Section 902.01.

Aggregate materials for HMA mixtures shall be supplied by an INDOT Certified Aggregate Producer (CAPP). The aggregates shall meet the requirements of Section 904.

The HMA fine aggregate materials shall meet the requirements of Section 904.02(b). except the fine aggregate angularity shall be modified as follows:

<table>
<thead>
<tr>
<th>Type</th>
<th>Depth from Surface</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0.4 inches*</td>
</tr>
<tr>
<td>A</td>
<td>60</td>
</tr>
<tr>
<td>B</td>
<td>45</td>
</tr>
<tr>
<td>C</td>
<td>45</td>
</tr>
</tbody>
</table>

*Note: For 1.75 mm mixtures, the fine aggregate angularity shall be 80 for Type A and 60 for Types B and C.

February 26, 2018
How to use?

▪ Certifications required
▪ Mix design for approval and Type D cert for acceptance
▪ Guidelines for Design
  ▪ Mixture types
  ▪ Volumetric mix design
  ▪ Recycled content
▪ Guidelines for Construction
  ▪ Surface preparation
  ▪ Temperature requirements
  ▪ Compaction

---

**2018 RECOMMENDED GUIDE SPECIFICATION FOR ASPHALT PAVEMENTS FOR LOCAL GOVERNMENTS AND NON-GOVERNMENTAL APPLICATIONS**

This recommended specification incorporates the latest asphalt pavement technologies. It attempts to present the best practices, procedures and processes but is not intended to replace sound engineering rationale, judgment and experience.

The Indiana Department of Transportation (IDOT) Standard Specifications, Section 403 – Hot Mix Asphalt, HMA, Pavement dated 2010, shall apply with the modifications as noted herein. Section numbers refer to IDOT Standard Specifications.

**HMA-01 Description**

This work shall consist of one or more courses of Hot Mix Asphalt (HMA) base, intermediate, surface mixtures or other miscellaneous HMA application.

**HMA-02 Quality Control**

HMA shall be supplied by a Certified HMA Plant in accordance with Indiana Test Method ITEM 562 – Certified Volumetric Hot Mix Asphalt Producer Program. HMA shall be transported and placed according to a Quality Control Plan (QCP) prepared by the Contractor in accordance with ITEM 400 – Contractor Quality Control Plan for HMA Pavement. The QCP shall be submitted to the Contracting Agency five calendar days prior to commencing HMA paving operations.

**HMA-03 Materials**

The aggregate for the HMA shall be supplied by an IDOT approved supplier in accordance with ITEM 562 – Asphaltic Aggregate Mix Design (AAS) Program and shall meet the requirements of Section 502.01.

Aggregate materials for HMA mixtures shall be supplied by an IDOT Certified Aggregate Producer (CAPP). The aggregates shall meet the requirements of Section 504.

The HMA fine aggregate materials shall meet the requirements of Section 504.02B; except the fine aggregate angularity table shall be modified as follows:

<table>
<thead>
<tr>
<th>FINE AGGREGATE ANGULARITY</th>
<th>Depth from Surface</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>3-4 inches*</td>
</tr>
<tr>
<td>A</td>
<td>40</td>
</tr>
<tr>
<td>B</td>
<td>40</td>
</tr>
<tr>
<td>C</td>
<td>45</td>
</tr>
</tbody>
</table>

*Note: For 4.75 mm mixtures, the fine aggregate angularity shall be 40 for Type A and 45 for Type B and C.

February 26, 2018
Mixture Types

- Type A, B, or C depending on traffic count
- INDOT eliminated Type A (Cat. 1) and Cat. 5 mixes
- Correlates ESALs to AADT and AADTT

<table>
<thead>
<tr>
<th>Mixture Type</th>
<th>Type A*</th>
<th>Type B*</th>
<th>Type C*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Design ESAL</td>
<td>&lt;300,000</td>
<td>300,000 to &lt;3,000,000</td>
<td>≥3,000,000</td>
</tr>
<tr>
<td>AADT (Average Annual Daily Traffic)***</td>
<td>&lt;4,000</td>
<td>4,000 - 15,000</td>
<td>15,000 - 30,000</td>
</tr>
<tr>
<td>AADTT (Average Annual Daily Truck Traffic)***</td>
<td>&lt;50</td>
<td>50 - 1700</td>
<td>≥1700</td>
</tr>
<tr>
<td>Commercial &amp; Residential Application***</td>
<td>Passenger car parking with &lt;500 stalls and &lt;20 heavy trucks** per day, residential driveways</td>
<td>Parking Lots with 20-300 heavy trucks** per day</td>
<td>Heavy commercial parking lots with 150-300 heavy trucks** per day</td>
</tr>
</tbody>
</table>
Volumetric Mix Design

- Design requirements align with all current INDOT specifications
- Specs for Type A mix added since removed from INDOT spec book
- Recommended PG binder grade for each mixture type and layer
Recycled Content

- Recommendation to specify maximum binder replacement at 25% or 40% (excludes Type C surface)
  - INDOT October 2016 spec changes
  - NAPA guidelines
  - Neighboring states’ specs
  - “Proper engineering judgement on project-by-project basis”

- PG binder grade jump when above 25% binder replacement
CONSTRUCTION BEST PRACTICES
**Surface Preparation**

**Subgrade and Subbase**
- Must support pavement and load transferred from traffic
- Be graded to properly drain and provide basis for final longitudinal and cross slope of pavement
- Uniformly compacted to required density
- May be stabilized with cement to increase strength
- Proof roll to check stability
**Surface Preparation**

**Milling**

- Mill to sound surface
- Improper mill depth will cause delamination
- Patch and crack repair where necessary
- Clean surface thoroughly after milling and prior to applying tack coat, no dust or debris
- Fine milling cutting drum for 4.75 mm surface
Surface Preparation

Tack Coat

- Promote bonding to the subsequent pavement layer
- Prevent slippage between asphalt layers
- Moisture barrier
- Uniformly applied without striping at 95% coverage
- “Break” before paving
**Temperature Requirements**

**Plant**
- Plant discharge maximum temperatures based on PG binder grade
- Warm mix asphalt allowed

**Field**
- Weather limitations for ambient and surface temperatures based on depth of asphalt course
- Asphalt may be placed at lower temperatures if density controlled or if approval given by Owner or Engineer
How important is density?

- Impacts service life directly
- Prevents further consolidation
- Provides shear strength and resistance to rutting
- Improves resistance to fatigue and thermal cracking
- Ensures impermeability
- Prevents excessive oxidation of binder
Compaction

Keys to Maximizing Density

- Establish rolling pattern and do not deviate from it
- Design at optimum lift thicknesses
- Watch temperatures when compacting – initial breakdown when HOT
- Proper roller operation techniques
AASHTO has been developing Pavement ME (MEPDG) for high volume roads, but a gap has developed for local roads and lower volume roads.
Why use software for pavement design?

- AASHTO 1993, 1998, and Pavement ME determine the pavement thickness for which the mean value of traffic can be carried given specific inputs.
- Over-conservatism leads to thicker pavements and higher cost.
- Reliability factor built into software decreases the risk of premature deterioration below acceptable serviceability.
- Use materials testing and traffic counts when possible.
- Avoid “one size fits all” designs.
What is PaveXpress?

An online tool to create simplified pavement designs using key engineering inputs, based on the AASHTO 1993 and 1998 pavement design process.

- Accessible via the web and mobile devices
- Free — no cost to use
- Based on AASHTO pavement design equations
- User-friendly
- Share, save, and print project designs
- Interactive help and resource links
