Against the Grain

"Linking Publishers, Vendors and Librarians"

Electronic Resource Management Systems: Still Trying to Hit the Moving Target

by **Heather Klusendorf** (Media Relations Coordinator, EBSCO Information Services)
<Hklusendorf@ebSCO.com>

In 2007, **Anne M. Mitchell**, Metadata Coordinator at the **University of Houston**, asked the question, "What if you could have a centralized repository for information about your electronic resources, where collection decisions, license terms, workflow elements and usage data could be systematically recorded, made available to library staff, and pushed to end users at their point of need?"¹ In her article, **Mitchell** discusses the basics of what librarians are looking for in a complete e-resource management system as determined by the **Digital Library Federation's Electronic Resource Management Initiative (ERMI)**. She explains that the "internal processes associated with electronic resources are more of a moving target" where the library doesn't have "physical control." Data about e-resources can change daily with publisher and title changes, ISSN and ISBN changes, and publishers who are still defining business models for offering access to their evolving e-resources. Librarians need an ERM that helps them hit the "moving target" that is e-resource management.

Electronic resource management (ERM) systems are not new — they've been available to librarians since early 2004. Today, numerous vendors offer ERM systems to libraries in addition to open source options and home-grown ERMs that librarians create in-house to meet their specific e-resource needs. With all these options, librarians still struggle with e-resource management. **Jill E. Grogg**, Electronic Resources Librarian at **The University of Alabama Libraries**, notes that "E-resource data remains spread out among too many systems, and there remains too much need for continued manual data entry."² It's not surprising considering the myriad issues that librarians face when trying to setup access to e-resources, including new registration on publisher platforms, activation of access, establishing linking, seamless renewal of access and more. Management of e-resource data often requires more than one system and includes individual details that require careful attention with many layers for data entry. Additionally, libraries find that multiple staff is needed to

help navigate e-resource setup. There are many pieces and many players involved.

In January, **EBSCO** added another ERM system to the market: **EBSCONET ERM Essentials**. Our goal is to provide a next-generation solution that solves the problems that we've heard from librarians over the years. **ERM Essentials** attempts to bring all the pieces together under one umbrella for succinct management that includes automated population of data for e-resources purchased through **EBSCO**.

As we geared up for the release of **ERM Essentials**, I began investigating current trends in ERMs. This led me to pore through research

If Rumors Were Horses

Crisis! I had **Rumors** all written, but I did NOT back it up! And now it is G-O-N-E! Gosh! This has never happened before. I have a new computer. It's the computer's fault! So — here we go again, if I have left something important out, please send me an email or post it on the **ATG NewsChannel** — www.against-the-grain.com/.

What's the big news these days. Let's see. The delightful, perfect (and he's a skier to boot) **Matt Nauman** will be joining **YBP** as **Academic E-Content Product Manager**. In this newly created position reporting to

the marvelous **Mark Kendall**, **Matt** will be responsible for leading and managing new **eContent product development programs** including **YBP's** new library-patron-driven acquisition service. There's absolutely no question that **Matt** is one of the most knowledgeable and respected individuals in the global academic bookselling industry. He joined **Blackwell North America (BNA)** in 1977 and held several key positions in the organization including **Chief Book Buyer and Marketing Manager**. **Matt** was promoted to **Director of North American Publisher Relations** in 1999 and ex-

From Your (wishing my puppy was still here) Editor:

Spring has sprung in Charleston. The azaleas and dogwood are out, the birds are singing, and we are forgetting the cold winter that we had down here and preparing for the heat that always comes with summer. So it is especially bittersweet to have spring without my 15-year-old puppy called Cleo who was truly a member of the family. But age got to the poor thing and she is now a fond, loving memory.

So it has been especially fun to work on this double-barreled issue of *ATG* about **electronic resource management systems** guest edited by **Heather Klusendorf** as well as **collection development policies** guest edited by **Gary Geer**. **Susan Klimley**, **Nancy Beals**, **Heather Staines**, **George Stachokas** and **Oliver Pesch** discuss the development of ERM systems. **Heather Klusendorf** discusses a survey of *ATG* readers regarding ERM systems. Our **OpEd** by **Michael Pelikan** talks about **ERM systems** and **eBooks**. Moving right along, **Gary Geer**, **Cindy Craig**, **Martha Hostetler**, **Margaret Foote**, **Matthew Landau**, and **Patrick Scott** discuss collection development policies regarding **subject collections**, **collection**

assessment, **purchase-on-demand**, **Kindles** and other **eBook readers**, and **special collections**. Plus **Jack Montgomery** has a **Group Therapy** on **textbook purchasing policies**. Wow! A lot to digest.

We have an interview with **Patrick Sommers** of **Gale** regarding the exclusive licensing agreement of **Time, Inc** and **Forbes** as well as an interview with **Marilyn Johnson** about *This Book is Overdue*.

Much more. **Book reviews**, **Reference Desk**, **Biz of Acq** on video streaming, **From the University Press** re **BISAC codes**, **Library perspectives** and **vendor responses**, **patron driven acquisitions**, **eBook identification** and the **ISBN** and much, much more.

I am running out of room plus I have to go and babysit a friend's cat. It's also time to go to the pound and get another furry friend to cheer us all up. Happy Spring and see you in June! Or – on the *ATG NewsChannel* – www.against-the-grain.com/. Much love, Yr. Ed. 🐾

Letters to the Editor

Send letters to <kstrauch@comcast.net>, phone or fax 843-723-3536, or snail mail: *Against the Grain*, MSC 98, The Citadel, Charleston, SC 29409. You can also send a letter to the editor from the *ATG* Homepage at <http://www.against-the-grain.com>.

Dear Editor:

I read with great interest your February issue of *ATG*, and spent a good deal of time digesting all the articles on the general subject of the death of the book.

As a long time believer in books, lover of same, and even sometime author, I beg to differ with this death sentence.

My reason is quite simple and was found just this past week in the eyes and voice of my four year old granddaughter. On a recent afternoon visit, she was told by her grandmother to "go sit with Grandpa Jack," which she promptly did. She sat next to me, leaned up to me, and looking up, asked: "Will you read me a book?" I replied "Yes," and she quickly jumped off the sofa, went to a two-foot

pile of kids' books, picked out the largest of the lot, and returned hugging it to her tiny chest. I remarked, "Well, **Alison**, this is certainly a big book for such a little girl!" Her only and very quiet reply was: "But it's MY book, Grandpa Jack." With that I proceeded to read to her, and each page, while new to me, was well-known to her, to the point of catching me on skipped words and even one whole skipped page, which brought out this rebuke: "Grandpa Jack, you missed a page!"

And so to me, like so many others, including little **Alison**, the book will never be dead, for there is always true magic in books.

With warm regards,

Jack Walsdorf

Rumors from page 6

Great to hear of **great press for libraries and librarians**. Check out this article in *USA Today* (Author: Librarian, cybrarian appreciation is *Overdue*, by **Rob Fleder**). And, of all things, our bam-zowie columnist, **Dennis Brunning** the great, has an interview with **Marilyn Johnson**, the author, in this issue, p.62.

www.usatoday.com/news/education/2010-02-25-overdue25_ST_N.htm

Was thrilled to learn that the **Johns Hopkins University Press (JHUP)** has appointed **Dean Smith** as **Director, Project MUSE** effective March 10, 2010. **Dean Smith** comes to **JHUP** with extensive publishing leadership experience and expertise in digital publishing initiatives, product management, technical direction, global sales and marketing, and strategic development. As **Director of Content** for the **American Society for Training**

and **Development**, **Smith** created a digital publishing strategy for the society's periodical, book, and research publications. During a decade-plus tenure with the **American Chemical Society**, **Smith** oversaw dynamic growth in worldwide electronic access to the society's publications, designing innovative pricing models, emphasizing library customer relations, and implementing effective internal management systems. He previously spearheaded electronic publishing efforts for a variety of medical publication products at **Chapman & Hall**, and led traditional journal publishing programs at **C&H** and **Springer-Verlag**. An accomplished writer and published poet, he holds a BA from the **University of Virginia**, and an MFA in Creative Writing from **Columbia University**.

iPod Shuffle Winners from the ERM Systems Usage Trends Survey

The winners of an **iPod Shuffle** were drawn after the survey closed. The two winners are **Joanne Romano**, Licensing and Serials Librarian, **Houston Academy of Medicine-Texas Medical Center Library**, Houston, TX, and **Dung-Lan Chen**, Bibliographic Services/Acquisitions Librarian, **Skidmore College**, Saratoga Springs, NY. The survey results are reported in this issue (see p. 34). 🌿

Notes from Mosier from page 8

eBooks are an example of this: **netLibrary** had some initial, enthusiastic adopters, but many libraries were unsure of how to integrate eBooks into their collections (many still are). Early reader devices also met with a tepid response (remember the **RocketBook**?). Although electronic resources now represent a significant part of collections, formats are not yet mature. Whether or not librarians embrace the current generation of readers, e.g., the **Kindle** or the **Sony eBook Reader**, remains to be seen. It's also unclear how the eBook providers will fare—inconsistent publisher coverage, awkward user interfaces, limits on simultaneous use and pricing issues may well prevent their sustainability.

This brings me to another point: vendors to no small degree must compete with their suppliers (there are many, many industries where this is not true). Hence another challenge for providers of digital content (e-journals, databases, etc.) is how to deal with publishers. If enough major publishers, say, the top 15 or 20 STM houses and university presses, aggressively and successfully market their own packages directly to libraries, the remaining content, be it from smaller academic presses or grey literature in general may be too expensive or too impractical to handle. Margin erosion can be dramatic indeed.

After the demise of the **Richard Abel Company** there was a tendency among libraries to avoid consolidating too much business with any single book vendor. Librarians would often say they didn't want "all the eggs in one basket." This gradually changed, and consolidation with fewer suppliers became more common, particularly as integration of workflows with vendor systems, and consortial buying became more widespread.

This began to swing back in the 90s. The emergence of Web-based companies like **Amazon** and **Alibris** provided libraries with alternatives, offering greater speed and more choices of condition and price. The result for the "traditional," brick-and-mortar wholesalers was loss of market share, quite often of mainstream trade publishers. Also, as budgets continued to decline, many libraries scaled back their approval plans and re-visited their firm order procedures.

On the other hand, the evolution of digital content and cheaper storage offered opportunities for new ventures, such as the "solutions" folks—by whom I mean **Serials Solutions** and **Syn-detics**, as a couple of examples. Moving forward we can expect cloud computing and open source to have an increasing impact in the market.

Another shift is demographic. A lot of people were drawn to librarianship and to the vendor world during the expansion of the 1960s. Many of us are retiring or changing direction in our careers.

What might we conclude from this? Vendors come and vendors go; while some known companies will endure, others will be absorbed or simply go out of business. Hence the title of this month's column: the dinosaurs will disappear. Those life forms capable of adaptation or migration will live on. New products, new constituencies, and new librarians and vendors will shape the new and emerging opportunities to come. Stay tuned! 🌿

An Argument for Implementation from page 22

Licensing resources and tracking the information contained within a license is a time-consuming process that necessitates a large number of faculty and staff hours to manage effectively. There are many constituency groups throughout the library that are concerned with this information. The electronic resource staff uses this information to assure compliance with legal obligations spelled out in each contract. Additionally, interlibrary loan also needs access to the information on a daily basis to inform their decisions on when they can use a digital copy instead of scanning or mailing the print version of the document. As more and more of our journal subscriptions migrate away from print to electronic, this process and access to information will become even more important and potentially more time-consuming for the interlibrary loan departments across the nation.

Tracking renewal and payment schedules is also a very important task that involves the ERP. This task is presently being performed using a variety of methods that include spreadsheets, calendars, email, or they are simply not being tracked effectively. Having the ability to track this information and send yourself or other staff members reminders and task assignment emails automatically, as some of the ERM systems allow you to do, has the potential to save both staff and faculty time. It also ensures that deadlines are not inadvertently missed, resulting in temporary loss of access to a resource or additional fees from vendors and publishers due to late payment.

So how does an electronic resource professional track all of this information and scheduling of tasks? For many ERPs, the answer is the best way they can with what they have access to. In the case of **Murray State University**, we have a home-grown ERM system consisting of

an Access Database, which I have to admit is not used that often but does contain some of the information that would be managed in a full-fledged ERM system. We also have a myriad of spreadsheets that contain login information and statistics. At this point in time I have also started to use my **Google** calendar to track dates of renewals and projects — when I can find the time to enter them into the calendar appointment template.

There are many good ERM products on the market today that address a large number of the needs that were stated earlier in this article. However, in comparisons to larger institutions, small- to middle-sized libraries have even more hurdles to acquiring and implementing one of these products. Many small- to medium-sized libraries do not have the necessary budget to pay for an ERM system; others do not feel that they have the time or the staffing capabilities to fully implement a system once it is purchased. **Murray State University Libraries** fall somewhere in the middle of these two issues. We do not have the time to implement a system such as **Ex Libris' Verde** or **Serials Solutions 360** due to the need to input massive amounts of information on the uptake. Nor do we want to spend a large amount of money on an ERM system due to the fact that our holdings budget is limited. Additionally, the state and university budgets do not look to be shaping up in a manner that will provide the University and the Library with the possibility for additional funding in at least the next few budget cycles. Despite these issues we are interested in purchasing an electronic resource management system sometime in the very near future.

I had the opportunity of viewing a live demonstration of **EBSCO's** new product **EBSCONET ERM Essentials** in January. **Murray State University** currently subscribes to a majority of our journal content through **EBSCO**, so we are very familiar with the interface of the **EBSCO Journal Subscription Management System, EBSCONET ERM Essentials**

has been integrated into the **EBSCONET Interface**, which allows a certain level of familiarity even before starting to work with the system. Some of the attractive features from the standpoint of a small- to medium-sized library include integration of the system into **EBSCONET**; allowing a supervisor to spend less time training and helping staff to acclimate to a new interface; the auto population of data fields by **EBSCO** if the journal, database, or other electronic resource is purchased from **EBSCO**; and the built-in ability to update links and other information automatically across the library's ERM, **A to Z Journal List**, and **Link Resolver**, if a library uses the **EBSCO A-to-Z** listing service along with **LinkSource**, **EBSCO's** link resolver product. **Murray State University Libraries** currently use **SFX** for link resolving, but we will be looking into the possibility of migrating to **EBSCO** products to enable us to take advantage of these time-saving features.

When evaluating the purchase of an ERM, a library needs to examine the following criteria: cost of the system and its implementation versus the cost of not implementing an electronic resource management system. This data should be considered along with other information the library has determined germane to the discussion of acquiring an ERM before acquiring a system from any vendor.

In conclusion, can a small- to medium-sized library function without an ERM system? Yes, many of us have been doing so for years, and many of us will continue to successfully provide access to our electronic content without the aid of an Electronic Resource Management System. However, we also face the continual increase of the number of electronic resources we must provide and maintain, and, in many cases, a reduction in the number of staff or the number of staff hours that can be allocated to these tasks. So, when should a library acquire an ERM system? I think the answer is simple: when it is more cost effective to do so. 🌱

Rumors from page 10

Wow! **EBSCO** will purchase the assets of the **OCLC NetLibrary Division** and the rights to license a select number of vendor-owned databases currently available through the **OCLC FirstSearch** service. The purchase includes the **NetLibrary eBook** and **eAudiobook** platform as well as operations and infrastructure in Boulder, Colorado. **NetLibrary eBook** content and **eAudiobook** subscriptions will continue to be available on the **NetLibrary** platform. **EBSCO** plans to provide access to the **NetLibrary eBook** content on the **EBSCOhost** platform. **NetLibrary eBooks**

will also continue to be discoverable through **WorldCat.org**. **EBSCO** has also purchased the rights to license certain vendor-owned databases that are currently available via **FirstSearch**. Existing **FirstSearch** subscribers will continue to receive access to these databases on the **FirstSearch** service through the end of their current subscriptions. In order that customers experience an ideal transition to **EBSCOhost** following the current subscription period, pending approval of database owners, **EBSCOhost** access to these databases will be activated to run in parallel with **FirstSearch** access for the remainder of the current subscription. "Proceeds from the sale of the **NetLibrary Division** will be reinvested in the cooperative, both in financing

current operations to keep our shared costs down for members and in resourcing important new product development," said **Jay Jordan**, President and CEO of **OCLC**. "I am pleased to say that **OCLC** will therefore be able to hold service prices flat on all **OCLC** services in the United States for a second consecutive year, through June 30, 2011." A FAQ for customer and member support, ordering, billing and service transition is available and the full press release is loaded on the **ATG NewsChannel**. www.oclc.org/firstsearch/content/questions/support.epnet.com/knowledge_base/detail.php?id=4789.
www.against-the-grain.com/

continued on page 28

How Can Publishers ... from page 26

envision a directory of configurations for resources, including the URLs, where admin functions are accessible. Another suggestion calls for the creation of a common repository for publisher documentation, so that libraries do not have to maintain this information on their own sites. In this area, **Deberah England** also suggests that publishers can set up a data feed in a standardized format to push the latest information out to their customers for loading into their ERMs.

Product Maintenance and Review

I was surprised to discover how manual a process the correction of titles can be on the library end. In many cases, I learned, this is due to a desire to update library systems between vendor updates. Improvements on this front, as noted by **Katie Rizzio**, stem from recognition by libraries, vendors, and publishers of the need for best practices, as well as from adjustments in ERM-providers workflow. Another side of this issue is the prospect of a regular package review between libraries and publishers. While a publisher might be surprised to hear inquiries from librarians about complimentary or bonus access to content, the need to display accurate collections to patrons and to make wise collection-development decisions requires the differentiation between owned, leased, or temporary access status. **Maria Collins** notes the usefulness of widgets on some publisher sites that allow the regular downloading of content freely accessible to a library. If there were a way to push this information out to libraries through a regular feed, it would be even more beneficial.

Ensuring consistent access, trouble-shooting, and technical support are major concerns. Library troubleshooters have become savvier, and vendors who may have initially underestimated the level of support needed have adjusted accordingly. Suggestions here focus on the ability to reach an actual person, rather than just a Web-form that might merely bounce back with a message that the support mailbox is full. **Greg Matthews**,¹⁶ Catalog Librarian and Coordinator of E-Resources Management at **Washington State University**, a veteran with more than five years ERM experience, contends that "the resolution of support issues has improved. In earlier days, a helpdesk staffer might know the technical side of the product but not *how* a library needed to use it; moreover, the library staff was still learning how to ask the right questions." Locating a knowledgeable person over the phone or via email to assist personally helps tremendously with weeding through ERM problems.

Renewal and Retention

Time and again I heard about the back and forth involved in reconciling title lists for a renewal. Some of this burden has been relieved, I learned, by automated processes available through subscription agents, but obstacles remain for those libraries that renew directly. Authority control in naming a resource is another factor to consider. Generation of an

accurate title list can be complicated further by the numerous iterations in the library's ILS — nearly 90 different variations for some larger publishers!

Where do we go from here?

Of course, some challenges with ERMs fall beyond what the publisher can directly affect. **Ivy Anderson** points to the role that an individual library workflow can play in ERM utilization. During my conversations, I detected a noticeable difference in librarian outlook, depending upon when a library implemented their ERM (or tried to). Early adopters were in many cases forced to create their own loading tools, to train themselves based on limited documentation, or even to build their own home-grown ERMs. Our ERMs today are very much first-generation products with both software and standards that have yet to mature enough to support these complex resources and workflows. Still, areas for improvement can be identified. **Ivy** stresses data accuracy from publishers' and system vendors' compliance with the recently-issued **KBART** recommended practice, as well as a focus on more granularity and consistency in holdings information to support interoperability among the many flavors of products now available. She stresses timely and structured communication from publishers, preferably via **ONIX-SOH** for direct loading. In addition, the overall need for better technical and administrative support remains across the many areas mentioned above.

ERMs are complex tools, referred to by many librarians as the "holy grail" or "magic bullet" that promises, to varying degrees, to make their lives easier. When I asked **Tim Jewell** whether he thought some cloud-based solution might come along and solve these complex issues, he chuckled and told me that "the ingenuity demonstrated daily by technology companies would likely require us all to continue to adapt." **Darby Orcutt**,¹⁷ Senior Collection Manager for Humanities & Social Sciences at **North Carolina State University** was quick to differentiate between two different levels where efforts might be focused: the

higher-analytical level versus the day-to-day need to "keep the trains running on time." I encourage publishers to participate fully in the conversation on both of these levels regarding next steps in making ERMs the needed "holy grail" that can reduce e-resource management difficulties. 🌱

Rumors from page 24

Following right along, **OCLC** and **H.W. Wilson** will work together to transition library subscriptions for **H.W. Wilson** databases provided on the **OCLC FirstSearch** service to the **WilsonWeb** platform over the next 16 months. A FAQ concerning **Wilson** databases for customer support, billing, content, and platform transition is available at www.hwwilson.com/oclc/ and a full press release is loaded on the **ATG NewsChannel**. www.against-the-grain.com/

Two really energetic and bam-zowie people have joined **On Demand Books** as Vice Presidents. **Steve Sutton** and **Susie Stroud** have joined **On Demand Books** as Vice-President, Director of University Library Sales and Vice President, Direct of Content Acquisition respectively. **Steve** will be responsible for sales

of **On Demand Books** print services via the **Espresso Book Machine** to university libraries and campus bookstores. We all remember that **Steve** has extensive university and library experience, most recently at **YBP Library Services** where he was VP-Library Services and Director of New Business Development. Prior to **YBP**, **Steve** held management positions at **Alibris**, **NetLibrary**, and **Blackwell's Book Services**. **Susie Stroud** will oversee the company's strategic efforts to increase the volume of titles available for purchase through the **Espresso Book Machine** catalogs and its **EspressNet** software. Her work will involve permissioning content from publishers, content aggregators, and international library collections. She will also manage the company's relationships with print on demand and digital asset repository partners. **Susie** has over 20 years of experience in academic, professional, and reference publishing, most

continued on page 40

Measure for Measure: Librarians Want ... from page 38

their ERM does not integrate with their ILS, which results in problems with managing budgets and the need to update multiple systems many times for the same data.

Another concern with current ERMs pertains to integration with other Web-based tools. Librarians who ranked the effectiveness with which their "ERM system integrates well with other Web-based tools" were primarily neutral (24%), with many of them noting in the open-ended question that their reason for a neutral ranking is a lack of full understanding of what the ERM can do. Twenty-two percent agreed, and 32% disagreed that their "ERM system integrates well with other Web-based tools." One librarian noted that the ERM "does not eliminate the need to use multiple systems to track e-resource information," and another offered that the "ERMS functions in modules ... and are not integrated in one system." This results in "significant duplicate efforts" when maintaining an ERM along with other systems.

Still Room for Improvement

Librarians were candid in their open-ended responses to questions, and we found repeated complaints about the amount of manual data entry

required when maintaining an ERM. When detailing why librarians might have cancelled or no longer use a purchased ERM, some librarians commented that they "found it too labor intensive for our staff to use" and that "It's all data and labor intensive no matter what you do." Librarians repeatedly mentioned the difficulty entailed in populating the ERM, labeling this process as "cumbersome" with "too many links/pages that need to be filled out" for e-resources information. One librarian noted, "Most data

must be entered manually. It's like the days when we had 40-pound invoices and had to manually key all those records."

Librarians had many positive comments, too, about how their ERM helps them manage their e-resources, such as "The ERM allows us, as a department, to share and manipulate e-resource related data to reduce duplication of effort and facilitate smoother workflows," and "The system has improved our ability to successfully manage these resources a hundredfold." While surveys are often a venue for respondents to note dissatisfaction, we were pleased to find that many librarians took the time also to offer positive feedback, reinforcing that ERM systems can greatly improve e-resource management given the library has enough available staff and time to implement and use the ERM. It appears that the hardest part is the ability to move past data population into true, effective ERM use.

Conclusion

It is important that vendors assist with these problems, creating an ERM product that does not require workarounds and can help librarians move past organizing data in multiple locations such as in spreadsheets, email, and other documents.

One librarian offers what seems to be the general feeling about ERMs today: "Although there are things that could be better, it's a huge improvement over life before ERM." Despite some negative experiences, it seems that ERM vendors are offering basic functionality that increases the effectiveness of e-resource management. Librarians may be dissatisfied with some pieces of their ERM, such as reporting functionalities and difficulty in locating license details, but, overall, librarians believe that ERMs are evolving — it's an ongoing effort between libraries and vendors. Librarians need new features and functionality; the ERM must continue to grow and meet the increasing needs of e-resources as libraries build larger and more diverse electronic collections. 🐾

Rumors from page 28

recently as National Accounts Director at **ABC-CLIO** and National Accounts Manager at **Greenwood Publishing Group**. Congratulations to both **Susie** and **Steve**!

Lulu.com sends news that it is no longer just a place to self-publish and sell works. It's a place to buy your favorite traditionally published books (or eBooks). **Lulu** just added more than 700,000 new titles to virtual bookshelves in the **Lulu Marketplace** — titles as diverse as **Harlan Coben's** "Caught" to "Blink" by **Malcolm Gladwell** — in an effort to create the world's biggest bookstore. **Lulu** is bringing open publishing to all, so that whether you are an author, publisher, educator, etc — and whether you write technical manuals or

romance novels — you have the most opportunities to share and profit from your ideas, knowledge and stories. More power to **Lulu**. The founder is **Bob Young**, <http://lulublog.com/2010/04/12/mesage-from-bob/>. <http://www.lulu.com/>

The trend for social networking continues. Just read a posting in the **Chronicle of Higher Education** called "Is Your Thesis Hot? Or Not?" There is a graduate student community called **GradShare** <http://www.gradshare.com/landing.html> which allows students to comment on each other's proposals and to ask questions. This just started and there are already over three thousand active members in the areas of arts, humanities, and linguistics, business, education, engineering, life sciences, physical sciences, and social sciences. Isn't this social networking wonderful? <Wiredcampus@chronicle.com>.

Just returned from the **12th Fiesole Collection Development Retreat** in Leuven, Belgium. What a fantastic place Belgium is. Did you know that they brew at least 700 beers and each beer has a special glass? But, I digress. Lots of informative papers were given. Go to the Website www.digital.casalini.it/retreat.

Speaking of which, the vivacious **Jill Cousins** (Director of **The European Library**, Programme Director of **Europeana** and Executive Director of the **EDL Foundation**) gave us an update on **Europeana** and asked for our input! Did you know that the **Europeana group** comprises a number of projects run by different cultural heritage institutions. All are part-funded by the **European Commission's eContentplus programme**. Over the next three years these projects will be con-

continued on page 53

Strategy 4: Recognizing Synergies Elsewhere in the Library

Nor do Special Collections necessarily have to aim at being self-sufficient for research. Special Collections are no longer just for faculty or specialist research but have as an essential task giving students experience using primary, original-condition, materials, as part of their undergraduate education.⁸ Indeed, an increasing number of courses build in an undergraduate research-component using Special Collections. A generation ago, the aim was to make each collection complete enough to support all imaginable research projects on the topic. In practice, Special Collections research has always relied for support on the proximity of the general stacks. Research on original-format materials in Special Collections, both in smaller collections and even on isolated highpoints, can also draw the contextual material it needs from microform or digital sources. For instance, a few years ago, a gift collection (of children's literature) brought with it five isolated manuscript pages of poems in his own hand by **James Weldon Johnson**, poet of the Harlem Renaissance and longtime leader of the NAACP. Neither Special Collections nor the stacks then held much **James Weldon Johnson** in original editions. We rapidly built a good collection of firsts, maybe thirty items in all. But a vastly wider context for use of those materials, as for work on **Johnson** generally, is provided by the microfilm series of the NAACP archives.

The Continuing Impact of Single Items

More dramatically, two years ago, the library purchased a first edition of **Phillis Wheatley's Poems** (1773). Even if it did not make the "Grolier 100" in 1893, the **Wheatley** (the first published book by an African-American) is clearly a highpoint, the kind of acquisition conventional wisdom would disapprove. The copy we got was apparently the first copy in any library in a state that is more than thirty percent African-American in population, it was immediately made available to schools via the Web, and it rejuvenated interest in some of our other early books by African-American writers.⁹ If a collection development policy cannot allow for that acquisition, it is an inadequate policy.

Closing Thoughts

The nostrum or mantra of "building to strength" has always been more honored in theory than in practice. Some libraries inherit great collections, some build great collections book-by-book, and some have great collections thrust upon them — or, in truth, most libraries have at least some collections acquired in each of the three ways. Focus is fine, but the focus should be less on perfecting the collections themselves, and more on fulfilling the purpose of having them. No policy can fully anticipate the element of opportunism in Special Collections development or the importance of weighing cost against value. The one essential, as **A. E. Housman** said about the editing of classical texts, is that you have a head and not a pumpkin on your shoulders. It helps for the Special Collections librarian or team and the library dean or director to have broad academic backgrounds, interests, and contacts. It is good if you also have colleagues in relevant teaching departments who share the big picture, rather than simply lobbying for a bigger piece of the pie. Collection building requires not just funds

and forcefulness and a single-minded plan, but balance and a sense of proportion and responsiveness to people and to opportunity. For Special Collections, at least, collection development should be less like driving a bulldozer and more like learning to ride a bicycle. 🐘

Endnotes

1. For a recent, nuanced application of this approach, see **Elaine B. Smyth**, "A Practical Approach to Writing a Collection Development Policy," *Rare Books & Manuscript Librarianship*, 14:1 (1999): 27-31. Surprisingly, even thirty years ago, **Cave's** standard book contained no mention of limiting Special Collections acquisitions to a few chosen strengths: see **Roderick Cave**, *Rare Book Librarianship* (London: Clive Bingley, 1976, revised ed. 1982).
2. **David H. Stam**, "So What's So Special?," Keynote address at conference "Building on Strength: Developing an ARL Agenda for Special Collections," Brown University, June 8, 2001, accessed at: <http://www.arl.org/rml/specoll/building/stam.shtml> (January 20, 2010).
3. See, e.g., **Roger E. Stoddard**, "Teaching the History of the Book at Harvard," in his *A Library Keeper's Business*, ed. **Carol Z. Rothkopf** (Newcastle, DE: Oak Knoll, 2002): 15-25.
4. For a library dean's argument that smaller libraries should sell or transfer isolated highpoints to those who can look after them, see **Mark Herring**, "Archival Treasures; Blessing — or Burden in Disguise," *American Libraries*, 31:7 (August 3, 2000):41-42.
5. The negative use of "building to strength," in allowing an dean or director to veto proposed new collecting initiatives, is shown by the response to a proposed book history collection by "the library director at a large Midwestern state university": "Within special collections ... it makes far greater sense ... to commit resources towards strengthening existing collections rather than opening new. ... 'the history of the book' could prove a costly distraction. ... Generally, I would urge special collections staff to build upon their existing strengths." Quoted in **Stephen Ferguson**, "History of the Book: Field Notes of a Curator," *Rare Books & Manuscript Librarianship*, 14:1 (1999): 33-48 (pp. 44-45).
6. The recent 75th anniversary volume, *Celebrating Research: Rare and Special Collections from the Membership of the Association of Research Libraries*, ed. **Philip N. Cronewett**, **Kevin Osborn**, and **Samuel Stret** (Washington, DC: ARL, 2007) selected just one collection to represent each library, showing the variety of materials now identified by ARL libraries as "strengths," from Renaissance books and eighteenth-century manuscripts, through collections on tractor manufacture and spiritualist experiments, to **Sri Lankan** manuscripts and a re-embroidered pink Victorian corset (representing a focus on women in the book arts). In almost every case these materials represent a collecting strand, not an exclusive focus, in a library that has well-balanced, even distinguished, collections, but the volume illustrates the risks of tying public identity to a single collecting focus.
7. Sensible models for such reassessment are **Smyth's** article, as in n. 1 above, or the 2004 policy at **Northern Illinois University**, on-line at: <http://www.ulib.niu.edu/aboutus/cdpolrbpscol.cfm>.
8. For recent discussion on the value and uses of original-format materials, see **Susan L. Peters**, "Primary Source Material: Responsibilities and Realities," in *Literature in English: A Guide for Librarians in the Digital Age* [ACRL Publications in Librarianship no. 54], ed. **Betty H. Day** and **William A. Wortman** (Chicago: ACRL/ALA, 2000): 105-117; and see also sample syllabuses in *Teaching the History of the Book*, ed. **Terry Belanger** and **Daniel H. Traister** (Charlottesville: Rare Book School, 2003).

Trust. Expertise. Service.

Interview — Patrick Sommers from page 60

We base these products on scientific data we've collected about how users seek and use information. We are investing in ways to make information more accessible and usable rather than in trying to keep information away from others.

ATG: *What's a publisher to do? It's interesting that we are seeing more and more publishers building their own content sites. We are also seeing more and more publishers making their content unique between elec-*

tronic and print. We are also seeing distinctions about how the full text is presented in html, xml, pdf, etc. Also in the searchability and presentation of that content.

What's the next step? Will journals continue to be published in their current form (a package of related articles) or will content take on new forms like individual articles, tables, charts, graphics, etc.? Any predictions?

PS: We believe that publishing will transition into many different models and delivery methods. Popular publications will continue and will be accessed through a variety of *tech-*

nologies: electronically through e-readers like the iPad, PCs, the publisher's Website and also print editions. Content from these publications will also be accessed through aggregated databases and the Web. Additionally, this content will be organized within context and available through knowledge portals and subject-specific Websites. The point is that publishing isn't transitioning from "this" to "that" — there will be many different models designed to meet the needs of many different types of consumers.

ATG: *I appreciate your frank answers. Thanks so much.* 🍷

Lost in Austin — The Golden Age of Librarianship

Column Editor: **Thomas W. Leonhardt** (Director, Scarborough-Phillips Library, St. Edwards University, 3001 South Congress Avenue, Austin, TX 78704-6489; Phone: 512-448-8470; Fax: 512-448-8737) <thomasl@stedwards.edu> <http://www.libr.stedwards.edu>

On March 3, 2010, I flew to Oklahoma City to attend the **27th Annual Conference of the University of Oklahoma Libraries** hosted by **Sul Lee**, Dean of Libraries at **OU**. This was my seventh of these conferences including the one in 1987 when I spoke on “Approval Plans In Times of Austerity.” Austerity was not the theme of this conference. It was “Climbing Out of the Box: Repackaging Libraries for Survival,” but the messages from the speakers used austerity as a starting point, complete with statistics that showed just how hard the current recession has hit **ARL** libraries and, by implication, academic libraries of all stripes.

For those of you who do not know about this conference (the proceedings are published each year by **Haworth**), there are about a hundred attendees from all over the U.S. with two from other countries this year, Canada and Japan, who gather to hear about collection development issues and current trends and challenges in academic librarianship. The format is simple and compact, and it works well. The conference begins at 1 p.m. on the first day and goes until 5 p.m., followed by a reception consistently delivering good food and drink and the opportunity for attendees to share ideas with one another and the speakers. The meeting resumes at 8:30 a.m. the next day and adjourns at noon. All of this takes place on a Thursday and a Friday, leaving the weekend free.

The **Association of Research Libraries** has been polling its members to try and establish some budget trends that show the effects of the recession and that predict the short-term future. **Charles Lowry**, **ARL**'s executive director titled his talk “Year Two of the Depression — North American Research Libraries in Fiscal Crisis.” **Lowry** cited **ARL** surveys and suggested that, “It is anticipated that the steep decline in institutional revenues will continue throughout the Fiscal Year 2009-2010 with repeated reductions and cyclical need to constrain expenditures. The necessary cutbacks are having an impact on all segments of **ARL** member library budgets — operations, staff, and acquisitions.”

James Neal, Vice President for Information Services and University Librarian **Columbia**

University Libraries, was equally eloquent as he spoke about “Collaboration by Cliché: The Radicalization of the Academic Library Commitment to Cooperation and the ‘Two Cool’ Initiative.” Two Cool is a play on the 2CUL partnership between the libraries of **Cornell University** and **Columbia University**.

“Over the next two years, 2CUL will explore ways to improve the quality of collections and services offered to campus constituencies, redirect resources to emerging needs, and make each institution more competitive in securing government and foundation support. The relationship could also provide a new blueprint for broad, non-exclusive partnerships between other academic libraries and other parts of the academy.” [From the **Cornell** press release, <http://www.library.cornell.edu/news/091012/2cul>]

Dennis Dillon, Associate Director for Research Services at the **University of Texas** at Austin Libraries and **Allen Powell**, President of **EBSCO Information Services** talked about changing business models, one from a major supplier's perspective (libraries have less money to spend, and we have less revenue) and the other from a major consumer's perspective (do we need selectors, and does our traditional warehousing make sense?).

Joan Giesecke, Dean of Libraries, **University of Nebraska — Lincoln Libraries** talked about “Finding the Right Metaphor: Restructuring, Realigning, and Repackaging Today's Research Libraries.” Her advice, or admonition, if you will, applies to most academic libraries where, as she notes, we are no longer collections-centered but user-centered. You can choose your own apt metaphor, but the one I liked and that seems to fit my library is “Library as Living Room.” Not only do we serve free coffee (and doughnuts on Wednesdays), but we also have an area with a couch, a settee, and two bean bags where regular naps are the norm.

The presentation that I most enjoyed (all of the above were exceptional conference papers) was by **Carla Stoffle**, Dean of Librar-

ies, **University of Arizona**. She points out that the current crisis for academic research libraries has been predicted since 1995. She talked about what the **University of Arizona Libraries** have been doing since the 1990s (she became dean there in 1992), much of which involved a total reorganization and restructuring of the way staff (librarians et alia) are used and described in their titles. Below is a **Google** search result on “**University of Arizona Libraries** Functional Teams.” There were many results but the one that gave me what I was looking for was a snapshot (more of a

panorama, actually) of the **UA Libraries** mission, organizational structure, and more. The **MSWord** document is aimed at prospective employees and states that each new employee will be assigned to a team whose assignment could change quickly, as needed.

For many years, I saw the changes being made in libraries as the automation of repetitive, labor-intensive tasks and never considered those changes to be fundamental. In fact, we did not always use our new tools to drastically alter how we do things (we all still do the same copy cataloging with a staff that might serve us better doing other things — this a point made by more than one speaker). Even the **OPAC** was basically a glorified, albeit more efficient, version of the card catalog. The options available today go far beyond the card catalog and the **Kardex** and are not necessarily library-driven. We are now using tools (Web 2.0) that stretch our limits far beyond what I could have imagined when I began library work four decades ago.

These are exciting times, even for old-timers, old-timers who should be more comfortable with change than those younger than we are. We have seen what good can come of change and understand that we recover from disruption and discomfort in short order and that even the changes we introduced are transitory. What remains a constant is change, and the older I get the clearer that becomes.

Change is good! 🐾

Rumors from page 61

and it gets old after a few days. Here's hoping that this ordeal ends soon.

This got **Buzzy** remembering back to January 1978 when several people leaving **ALA Midwinter** went out to the O'Hare airport only to learn that their flights were cancelled! They had to go

community and research centers. An endowment, as well as support from scholarly societies or funding agencies, may also be part of our mature portfolio.

Is there any role for commercial entities in the long-term sustainability model? If so, what might that look like?

Possibly. We've had some preliminary discussions with a few of the discipline-relevant scholarly societies about how they might be involved. We hope to continue the conversation with them over the course of the next year or two. Participation by the societies or commercial publishing entities must, of course, be informed by terms and conditions that are acceptable to both the **arXiv** stakeholders and the outside agencies.

For other disciplines in which the culture of mass distribution of open-access content by authors is not as strong, are arXiv's recent financial developments encouraging or a cautionary tale?

Both. The mass distribution of content is costly. There are a variety of ways to recover those costs, and it's both prudent and shrewd to devise a model that will ensure that the resource will realize revenue from a variety of differ-

Standards Column from page 86

provides the linkage of different manifestations of the same content. For example, the first **ISTC** was assigned to **Charles Darwin's** *On the Origin of Species*. This text has been reprinted by numerous publishers in various forms, both print and electronic, since it was first published in 1859. A search of the **WorldCat** catalog found 281 different editions with **Charles Darwin** as the listed author, with the latest edition appearing in 2009. While few books have this many editions, in today's digital environment, if each version is unambiguously identified (presumably with unique ISBNs), it's very likely that every single title published today could have at least a dozen different versions and an equivalent number of ISBNs. The **ISTC** will be the tool that links these different versions together, both for discovery and collection management. On the publisher side, the **ISTC** also assists with rights management. If the **ISBN** is used consistently for disambiguation, the **ISTC** can provide the umbrella framework for all of the multiple product references and could help to

streamline metadata creation and improve its quality. The **ISTC** standard was published in early 2009 and is currently being used by a few publishers but needs to gain wider adoption to be broadly useful. Additionally, best practices need to be adopted regarding the sharing and consistent application of metadata between the **ISBN** and the **ISTC**.

The **International ISBN Agency** recently released a white paper (<http://isbn-international.org/news/view/29>) describing the problems of **ISBN** assignment to eBooks, emphasizing the need for consistent practices for assignment of **ISBNs**, and recommending some solutions. From the perspective of a centralized and globally adopted system, ensuring the consistency of the system's application is paramount. This applies not only to different formats, but also to sub-items, such as chapters or other fragments of works, when these items become part of the supply chain. The paper also suggests that there might be a need to identify the generic publication file produced by the publisher that is then used for further re-formatting and distribution. The music industry has such a system in place for the original track, which can then be placed on a variety of albums or even sold separately.

This original track — defined as “an abstract entity representing a bundle of one or more Digital Resources compiled by an Issuer for the purpose of electronic distribution to individual consumers, directly or through intermediaries” — is identified using a Global Release Identifier, or **GRID**. The **GRID** standard (http://www.ifpi.org/content/section_resources/grid-standard.html) clearly states that “the Release is not itself a Product.” The **International ISBN Agency** is now discussing with various stakeholders whether a similar system of using generic eBook release identifiers is both feasible and of value.

Although the digital distribution of content has been gaining momentum for more than a decade and a half, the eBook is still in its relative infancy. But eBook production is growing faster than its predecessors, such as the e-journal. As a result, the problems in the supply chain are getting out of control. We need to act quickly to develop a consensus solution. If you're a stakeholder in this arena, the **International ISBN Agency** (<http://isbn-international.org/>) and the **International ISTC Agency** (<http://www.istc-international.org/>) are good places to start. 🌿

Rumors from page 63

back to the Palmer House and **ALAP (ALA Players)** was born. Every **ALA** winter and summer conference there is a dinner dance put together by **Fred Goodman** at **LLSI** usually on Monday night to commemorate the event. And, it's a hoot to go to the **ALAP** homepage about the history of this whole event. It's complete with a photo gallery, and memories of the 20th anniversary gala in New Orleans in 1998 homepage.mac.com/gailmcgovern/PhotoAlbum23.html.

Speaking of Iceland — The **Steering Com-**

mittee of Iceland Consortia for electronic subscriptions has selected **ProQuest Central** to provide electronic resources nationally for the next three years. On behalf of the Ministry of Education, Science and Culture, the **Steering Committee** is responsible for the evaluation and procurement of resources which can then be accessed by all Icelandic citizens from any computer within the country. The project is funded by the Ministry along with more than 200 libraries, educational institutions and private firms. www.proquest.com/

Yours truly was just interviewed by **Jack McHugh** and the interview is posted on his Website. www.johnbmchugh.com/. Click on

expert interviews and mine is the fourth one down. Would love comments.

Was interested to see a report on eBook devices from the floor of the **Consumer Electronics Show (CES)** in Las Vegas. Try this link for a look at some of the devices. Ho-ha! aptaracorp.com/context/Aptara_Context_Feb_2010.pdf#page=3?elq=369ac855817c4b66b93d7b10007dfcc

Last but not least! Baby Georgia Helen Walser is here! Born March 7, 2010 at 6:49pm. 7 lbs 10 oz; 19.5 inches long. This is Katina's and Bruce's second grandbaby! And Georgia Helen skyped her father in Iraq in the first 15 mins of her life! She is obviously a genius! ;-) 🌿
