Study human intelligence by emulating it.

Binocular vision is nice, but not necessary.

Gravity helps us understand position.

New sensors might help in some situations.

How do men and women see differently?

Understanding ourselves is the Holy Grail of the Human Kind.

Figure-ground = 10 computations to make to discern objects.

How to make sense of 2D images.

Mathematical concepts: a priori constraints.

We don't yet know how our minds work.

Robot vision...
