File No. 3-3-37

Project No. C-36-54KK

The attached brief Progress Report "Indiana's Motorboat Fuel Tax" by D. C. Robinson and W. L. Grecco is on the EPR research project "Recreational Impact of Federal Multi-Purpose Reservoirs". The special study was made in an effort to estimate the actual quantity of gasoline used by motorboats in Indiana.

The report is presented to the Board for information and for acceptance as partial fulfillment of the objectives of the referenced research project. The report will also be submitted to the ISMC and the BPR for their review, comment and acceptance.

Respectfully submitted,

ABSTRACT

The purpose of this research investigation was to estimate the total amount of gasoline consumed per year by motorboats in the State of Indiana for which state fuel tax was paid.

Motorboat fuel consumption data for 1968 were obtained from questionnaires mailed in February 1969 to a sample of boatowners randomly selected from motorboat registrations maintained by the Department of Natural Resources.

The response to the questionnaires revealed that approximately 19 million gallons of fuel were consumed by motorboats in Indiana in 1968. This amount represented eight tenths of one per cent of the total taxable gasoline sales in that year. Previous studies in California (1954) and Missouri (1966) have revealed values of six tenths and seven tenths of one per cent respectively.

The questionnaires were also used to provide information on the amount and type of boat usage within each of nine categories of motor horse power, and about the gasoline tax refund behavior of the motorboat owners.

INTRODUCTION

From 1968, a State Tax of 6 cents was levied in Indiana on each gallon of gasoline purchased. The revenue thus obtained is directed, as in most states, to the financing of highway construction, maintenance and related work.

There are, however, other purposes quite unrelated to highway use for which gasoline is purchased. The State of Indiana, as with most states, provides for tax refunds on fuels used for non-highway purposes, such as agricultural machinery, aircraft and motorboats. It has been generally assumed that very few boatowners claim the refund to which they are entitled.

The extent of the fuel consumed by motorboat users in the various states have ranged from high estimates made by motorboat associations to lower estimates by the various governmental highway agencies. The Indiana State Highway Commission proposed this study to provide an estimate of the gasoline consumed by the motorboat owners throughout the state and of the extent to which these users obtain the motor fuel tax refund from the State.

DATA COLLECTION

The Indiana Department of Natural Resources maintains a registration list of boatowners. From a sample of 2400 boatowners, a random sample of 700 was selected and these were sent a questionnaire (attached as Appendix). Forty-five were returned due to insufficient address. Boatowners responded with 284 usable returns or 43 per cent of 655 possible returns.

Postcard reminders were sent to 300 of the original sample to attempt to stimulate further response. It was not possible to direct the reminders to only the non-respondees. This resulted in a return of additional questionnaires or approximately ten per cent of the 300 cards sent. Because the second group of returns strung out over a several month period, the analysis was made from the initial returns.

ANALYSIS

Motorboat Registration

Records of the Department of Natural Resources indicated a total registration of 155,000 boats owned. The questionnaire response indicated that fourteen per cent were no longer boatowners. Applying this statistic to the population of the Department's records would provide a new estimate of 133,169 boatowners.

In arriving at these estimates, it was assumed that the questionnaires received were representative of the 700 originally mailed out. As a rough check, a figure for the total motorboat registration was estimated from the questionnaires received after reminders were mailed out. The estimate from this small sample was 135,000 boatowners, which lends confidence to the estimate to be used.

Results of the survey indicate that there are 1.33 motors per boat. Based on this inference, the total number of marine motors in the State of Indiana was therefore estimated to be 175,194.

Gasoline Consumption

The total gasoline consumption in 1968 by motorboats in Indiana was estimated to be 19 million gallons. This represents eight tenths of one per cent of the total taxable gasoline sales in Indiana in 1968

which amounted to 2,322 million gallons or a tax of \$139.7 million. (1)* This estimate results from the survey questionnaire (Appendix) Question 7a which asked for the number of gallons of gasoline consumed in the previous twelve months.

Mean fuel consumptions in 1968 were estimated for each of the nine horsepower categories. These means were calculated from a reduced sample consisting of motorboat owners reporting only one motor. This was necessary because boatowners reporting two or more motors failed to provide separate data for each motor. These estimates are thus based on the assumption that motors from the same horsepower category belong to the same population regardless of whether or not they are owned by a single or multi-motor owner. There is no way of testing the validity of this assumption with the information available in the questionnaires. Table 1 indicates the mean annual gasoline consumed by category. Table 1 and Figure 1 show the percentage distribution of motors by horsepower category. For example, there are approximately 44 per cent of the marine motors ten horsepower or less. The Missouri (2) study estimated 40 per cent for this category. The California (3) study used boat lengths rather than motor horsepower classification because of variations of fuel consumed per hour by the same rated motor of different ages and conditions.

The mean gasoline consumption in each horsepower rating category is shown in Table 2, column 1. These means were calculated from the answers given to Question 7a on the Questionnaire (total amount of gasoline consumed during a previous 12 month period). The product of the answers to Questions 3 and 4 (days of boat use per typical year and

100.1 and over	256.15	352.08	272.39	

gallons consumed per typical day) also gives an estimate of the total amount of gasoline consumed within a year. Column 2 of Table 2 shows the mean gasoline consumptions which were calculated from these data.

A two-way analysis of variance test was applied to the two sets of means and there was found to be no significant difference between the two sets with an α level of 0.05. The purpose of this test was to determine the internal consistency of the responses to Question 7a versus Questions 3 and 4. The analysis indicates that the respondents completed the questionnaire with reasonable care, that the data were probably based upon records or fairly accurate personal estimates. It was decided to use the responses to Question 7a to calculate the total gasoline consumption for 1968 (see Table A), because the question specifically refers to "fuel consumed during a previous 12 months period", not "a typical year" as in Questions 3 and 4.

Mean gasoline consumptions were also calculated from data that were collected from interviews of motorboat owners at Cagles Mill, Mansfield and Monroe Reservoirs during summer 1968. These are tabulated in Table 2, column 3. The same test that was applied to columns 1 and 2 was applied to columns 1 and 3. There was found to be no significant difference between the questionnaire data and the field data. The purpose of this test was to check the validity of the questionnaire responses. The analysis suggests that the sample of motorboat owners that were mailed questionnaires was indeed a representative sample of the total population of motorboat owners in the State of Indiana.

Activities of Boatowners

It is estimated that the average motorboat owner makes 28.3 boating trips per year, and that he uses his boat 3.7 hours per trip. These

figures give an average motorboat usage of 105 hours per year. The way in which motorboat owners spend this time varies from one horsepower rating category to another and is shown in Figure 2. It can be seen that the proportion of time spent on fishing decreases with increase in motor horsepower, while the proportion of time spent on cruising and skiing increases with increase in motor horsepower.

Out-of-State Motorboat Owners

It was found that almost 7 per cent of all motorboat owners interviewed during 1968 at Cagles Mill, Mansfield, and Monroe Reservoirs lived outside of Indiana. Closer examination of the data, however, revealed that approximately 82 per cent of all the out-of-state motorboat owners interviewed were encountered at Mansfield alone, 3 and 15 per cent being the proportions at Cagles Mill and Monroe respectively.

The high proportion appearing at Mansfield can be explained by this reservoirs close proximity (26 miles) to the Indiana-Illinois Stateline. Cagles Mill and Monroe are 43 and 82 miles respectively from the Stateline. It is very probable that the actual proportion of out-of-state motorboat owners using recreational facilities in Indiana is much less than the 7 per cent recorded at the three reservoirs mentioned above.

It is not known how the amount of gasoline purchased in Indiana by these out-of-state motorboat owners affects the estimate of the total gasoline consumption by motorboats in Indiana. The effect can be considered negligible on the basis that some small portion of the gasoline purchases reported here by Indiana motorboat owners were made while visiting recreational facilities in other states.

FIGURE 2
PERCENTAGE OF TIME SPENT ON MAJOR ACTIVITIES BY HORSEPOWER

State Tax Refunds

It is estimated that the State Tax was refunded on approximately 3 per cent (equivalent to \$37,000) of the total amount of gasoline consumed by motorboats in Indiana. In addition it is estimated that approximately 7 million gallons of gasoline (tax equivalent \$420,000) was sold tax-exempt at State-licensed marinas at recreation areas in Indiana in 1968. (There are approximately 100 marinas currently licensed in Indiana). The combined total from refunds and tax-exempt sales of gasoline is \$457,000. This still leaves a total of \$680,000 that was unrefunded in 1968.

CONCLUSION

There were 2,322 million gallons of gasoline sold in 1968 in the State of Indiana for all purposes. Of this amount 18.7 million gallons were purchased by the motorboat users. Approximately three per cent of this motorboat consumption was subject to tax refund or approximately 0.6 million gallons. Another 7.0 million gallons were sold tax-exempt at State-licensed marinas at the various recreational areas throughout the state.

Therefore 11.1 million gallons of gasoline were purchased by motorboat users in 1968 for which tax was paid into the motor vehicle tax fund. This amounted to approximately \$680,000 or less one half of one per cent the revenue received from motor vehicle fuel tax.

APPENDIX
QUESTIONNAIRE

Motorboat Fuel Consumption

The state of Indiana is continually striving to improve existing recreational areas and develop new facilities.

A study is currently being conducted by Purdue University to help in planning for these recreational areas. One phase of this study concerns motorboat fuel consumption. We are asking a carefully-selected sample of boat owners across the state to complete the enclosed questionnaire to help us with this study.

You are asked not to place your name on this questionnaire as there is no reason to identify any respondent.

- A. Our sampling technique includes all boat owners in the state. If you do not own a motor, check here and simply return the questionnaire.

I do not own a motor with my registered boat(s).

- B. If you do own a motor please check the appropriate boxes or respond to the questions asked.

1. Is your motorboat (Check One)

an outboard an inboard-outboard an inboard

2. Check the appropriate category for the horsepower rating of your motor(s).

<u>First Motor</u>		<u>Second Motor</u>
_____	0.0 - 4.9	_____
_____	5.0 - 7.4	_____
_____	7.5 - 10.0	_____
_____	10.1 - 15.0	_____
_____	15.1 - 25.0	_____
_____	25.1 - 40.0	_____
_____	40.1 - 60.0	_____
_____	60.1 - 100.0	_____
_____	100.1 - 150.0	_____
_____	150.1 - 200.0	_____
_____	200.1 - up	_____

3. In a typical year how many days will you use your boat?

_____ days per year

4. What is the average amount of fuel your boat will use for a typical day of boating?

_____ gallons per day

5. How many hours will your motor be operated during a typical boating day?

_____ hours

6. What percentage of your boating time is spent in each of these categories?

_____ % skiing

_____ % cruising

_____ % fishing

_____ % other purposes

7a. How many gallons of gasoline did you or other people use in this boat during a previous 12 month period?

_____ gallons

7b. Did you file a claim for a state tax refund on this fuel?

Yes

No

7c. Did you file a claim for a federal tax refund on this fuel?

Yes

No

8. How many miles (round trip) did you ordinarily travel between home and the lake or river you usually used the boat in during a previous 12 month period?

_____ miles (round trip)

Thank you for your kind assistance.
