Press Clippings — In the News — Carefully Selected by Your Crack Staff of News Sleuths

Column Editor’s Note: Hey, are you reading this? Your esteemed column editor would like to know what you think! Zip off a quick email to <pmrose@buffalo.edu>. Does BYMI fill your needs? Do you have any suggestions for changes? I’m listening! — PR

I SEE MY LIVER, THEREFORE I AM
by Pamela M. Rose (University at Buffalo)

Our belief in ourselves as anatomical entities is part of a centuries-long collaboration between pioneering anatomists, missionary schoolteachers, educational reformers, and present-day anatomical entrepreneurs. Consider that prior to the 1834 publication of William A. Alcott’s The House I Live In, most American had never seen an anatomical illustration. And that in the 1830’s, a dedicated band of Baptists taught basic anatomy to the Karen hill people of Burma in an effort to combat their belief in animism. And still further, that modern shock and reality media programming, with unveiled scenes of gutted bodies and body parts, and anatomical art such as staged by German anatomist Gunther von Hagens, seeks to reconnect us yet again as anatomical beings.

LITTLE LOST URL
by Pamela M. Rose (University at Buffalo)

“Honest, Professor, the Web link was just there last week!” While Internet references are proliferating in medical and scientific periodicals, the URLs for those references are also disappearing at an alarming rate. In a study that examined frequency, format and activity of Internet references in three high-circulation US journals, researchers found that inactive links increased from 3.8% at three months after publication to 13% at 27 months post-publication. Inactive references were most commonly .com addresses, followed by .edu. There are strategies for recovering the information, including contacting the author and taking advantage of search engines that cache information.

UH-HUM ... RIGHT ...
by Bruce Strach (The Citadel)

“Surfer’s Voice” is the new term for someone inattentively talking to another on the phone while surfing the Web, instant messaging and downloading music. Mindless information saturation is swamping us. Cell phones have created “absent presence.”

After 20 years of the PC revolution, we need an information diet, but the solutions are elusive. Companies are creating email-free days.

SCIENCE PHOBIA
by Pamela M. Rose (University at Buffalo)

Part of kids’ aversion to science may stem from a deep dislike for the subject by authors of popular children’s books. Of seven writers interviewed, four named math and two named chemistry as their worst subjects. Their overwhelmingly favorite subject? English.

EXTREME PAIRS KISS (KEEP IT SIMPLE...)
by Sandra Beehler (Lewis & Clark College)

The article discusses the pros and cons of the new approach to developing software called “extreme programming” (XP). Kent Beck, who wrote the first book on XP, extols it as an alternative to the current wasteful programming process, rife with cost overruns, late releases and flawed programs. At the heart of XP are 12 simple rules, which include an emphasis on simple program design, continuous testing, and pair programming—two programmers work together at the same machine, one typing code, the other casting a critical eye on it. Advocates say they prefer working in pairs and have more confidence in their results. Critics dismiss XP as a fad that only recycles old ideas.

OPEN COURSE OPPORTUNITIES
by Sandra Beehler (Lewis & Clark College)

In April 2001, the Massachusetts Institute of Technology announced a project called OpenCourseWare that would post content of MIT classes on the Web, with hopes of inspiring other educators to share knowledge worldwide. The idea quickly gained financial support from the Mellon and Hewlett foundations and as many as 2,000 courses will be offered by 2006. Though the project has been enthusiastically received worldwide, there have been a few problems. Entrepreneurs quickly came up with ways to try to profit from the free information—one proposed to offer a Bachelor’s Degree in MIT Studies—and a UNESCO study concluded that many of the countries simply do not have the means to access the MIT site. Success in the long run will depend on the emergence of learning communities based on the OpenCourseWare content, with third parties developing tools to organize discussion groups and other support mechanisms typically available for courses in a university setting.

WHERE DO COFFEE TABLE BOOKS GO TO DIE?
by Bruce Strach (The Citadel)

Coffee table books are tricky things for publishers and many of them flop. Rick Smolan and David Elliot Cohen’s 1986 A Day in the Life of America was a big success that they sold to HarperCollins along with a five-year non-compete agreement. HarperCollins saw it as a series and did A Day in the Life of the United States Armed Forces which was a dud selling only 14,000 books so far.

Now Smolan and Cohen are back with America 24/7 with Pearson PLC’s DK Publishing unit. Of course they had a costly legal squabble with HarperCollins which figured it had bought the Day in the Life franchise. Hence the 24/7 title change.

Digital cameras have been a big help for them. 25,000 photographers took 250,000 digital pictures during a week in May. These have, of course, been greatly distilled to fit into a book. But you can go to the Website and pull up an image and get a personalized dust jacket made for your copy of the book.

And DK is going to do 50 state-by-state 24/7 titles. That sounds like a lot of ponderous donations to county libraries one day.

NO POETRY IN MONEY
by Bruce Strauch (The Citadel)
Launched in 1912, the fabled Poetry magazine limped along in genteel poverty while introducing Wallace Stevens, William Carlos Williams, Sylvia Plath and T.S. Eliot to the world. Editors worked two jobs and the phone bill often went unpaid.

Then Ruth Lilly gifted them $100 million and the trouble began. Realors and investment outfits pushing their schemes. Starving poets begging for grants. Rival poetry groups screaming about the unfairness of it all. A lawsuit with a bank over mismanagement of money. And the firing of the long-time editor who had successfully solicited the gift from heirs Lilly.

LIFE AFTER PERKS
by Bruce Strauch (The Citadel)
Newspaper Baron Conrad Black (Chicago Sun-Times, The Telegraph, the Jerusalem Post) was ousted by his board amidst a flurry of fiduciary questions. One of the more curious footnotes is that along with the jets, butlers and lavish apartments paid for by the company Hollinger International is an $8 million Franklin D. Roosevelt papers collection. Dealers are quoted as being baffled by the enormous price. Roosevelt was a prolific letter writer and there are reams of the stuff around. Hollinger paid Washington and Lincoln prices.

Asked by the London Times about the company purchase, Black replied: “$8 million was not something I was prepared to spend (personally).”

LEWIS & CLARK BIBLIOMANIA
by Bruce Strauch (The Citadel)

A true bibliomaniac, he went heavily into debt, sold his house and car, and worked multiple jobs. Now Lewis and Clark College has paid him $35,000 each year for seven years for the collection. And he gets a desk in the rare books room where he sits reading and playing host to visiting researchers. He wears a badger hat and a long ermine vest.

EUROPA WORLD
The Europe World Year Book Online
www.europaworld.com
Experience the dynamic new online version of the Europa World Year Book, the indispensable source for information on world affairs.
EUROPA WORLD delivers:
• Up-to-date information on world events
• Sophisticated search and browse functions
• Comparative multinational statistics in graph and tabular form

Price quotes, order details, and free trial subscriptions available from
